Beginning-to-end Solutions for Genomics

In our continuous efforts to improve efficiencies and develop new tools and technologies for life science researchers, we have scientists working in Corning R&D labs doing what you do every day, across the globe. From collection to analysis, our technical experts understand your challenges and your need for simplified, efficient, low to high throughput genomics processes.

A combination of global manufacturing expertise, extensive use of in-house automation and a thorough understanding of your processes enables Corning to offer a beginning-to-end portfolio of high quality, reliable consumables and reagents for genomics applications.

Overview – Automation Tips

Axygen® automation tips are manufactured to meet precise specifications required for accurate sample delivery in automated applications. Our tips are manufactured using high quality molds coupled with Corning process controls, ensuring complete compatibility and consistent fit. These tips are manufactured using automation to ensure tips are free from contamination and defects that may be caused by hand racking.

- ▶ Wide product offering combined with in-house engineering expertise guarantees optimum workstation performance
- ▶ Complete control of manufacturing process with comprehensive QA and QC testing processes ensures defects are eliminated
- ▶ Optimized fine point for accurate dispensing
- ▶ Filter barrier prevents aerosol and liquid contamination
- ▶ “Plug and Play” – no software or hardware changes needed
- ▶ Color-coded racks for easy identification of tip size
- ▶ ANSI/SLAS footprint rack dimensions for precise fit on the deck (except where noted)
- ▶ Nonsterile, sterile, filter/sterile versions are available
- ▶ RNase-/DNase-free, human gDNA-free
- ▶ Nonpyrogenic

Axygen Automation Tips are Compatible with:

Aurora Biomed

- ▶ VERSA™

Agilent

- ▶ VPrep® and Bravo

Agilent BioTek

- ▶ Precision™ and Precision XS

Beckman Coulter

- ▶ Biomek® FX, NX, i5, i7

Corbett

- ▶ CAS
- ▶ X-tractor Gene, QiaXtractor

Dynamic Devices

- ▶ Oasis LM

Hamamatsu

- ▶ 6000 and 7000 Series

Hamilton

- ▶ CO-RE™ Microlab® Prep™, STAR™ Line, Nimbus®, and VANTAGE®

Molecular Devices

- ▶ PatchXpress, FLIPR® Tetra, and FlexStation®

PerkinElmer

- ▶ Janus® and Evolution P3
- ▶ VariSpan

Qiagen

- ▶ BioRobot®

Tecan

- ▶ MCA96 Head
- ▶ LiHa Head

5 Reasons to Choose Axygen® Automation Tips

- 1 Automated Assembly**
Ensures product is free from contamination.
- 2 Electronic Monitoring of Manufacturing**
Advanced technology supported by experienced personnel results in high quality products.
- 3 In-house Testing**
In-house automation lab allows product to be validated prior to release.
- 4 Customer Site Testing of New Products**
All new products are validated at customer locations to ensure proper function.
- 5 Broad Product Offering**
Corning routinely offers automation tips not offered by the robotic workstation manufacturer.

Axygen® 96-well Format Tips

Compatible with Aurora Biomed VERSA™ Workstations

- Compatible head: 8-channel
- Non-ANSI/SLAS hanging tip, polycarbonate rack

Overview – Pipet Tips

Axygen® pipet tips are designed to fit a wide variety of single- and multi-channel pipettors. Flexible walls and a series of internal sealing rings ensure a secure fit with less force required to load and eject. Extended length and wide bore styles are also available.

- ▶ Universal fit tips are compatible with most research grade pipettors
- ▶ Aerosol barrier tips prevent aerosol and liquid contamination
- ▶ Universal fit and aerosol barrier tips are available in bulk, racked, and reloading formats
- ▶ Bevel delivery orifice reduces sample hang-up and improves pipetting accuracy
- ▶ Graduation marks allow a visual confirmation of the pipettor aspiration volume
- ▶ RNase-/DNase-free
- ▶ Nonpyrogenic
- ▶ Sterile and nonsterile packaging is available
- ▶ Axygen Maxymum Recovery® surface allows maximum retrieval of precious samples

Tip Packaging Options

Bulk Packaging

Pipet tips are available in bulk-packaged, resealable plastic bags – keeping them safe from contamination.

Hinged Racks

Axygen tip racks in durable polypropylene provide excellent stability on the lab bench. They feature a hinged lid with a snap fastener.

Stack Racks

Inter-locking stack racks offer tip stability while saving valuable bench space.

Beveled Pipet Tips

The angle on Axygen beveled tips reduces the surface area of the tip with the receiving vessel. This angle combined with an ultra-thin orifice reduces the effect of liquid samples creeping up the side of the tip (capillary effect). By reducing this capillary effect, Axygen beveled tips dispense samples more accurately.

Standard bevel tip (left) has larger contact area for reduced pipettor control. Axygen bevel tip (right) has a smaller contact area for more accurate dispensing.

Wide Bore Pipet Tips

Wide bore tips are ideal for pipetting viscous materials, genomic DNA, or delicate cell cultures.

Barrier Pipet Tips

Axygen® aerosol barrier tips are ideal for molecular and microbiology applications in which carry-over contamination can invalidate results and waste time and resources. The filter placement allows plenty of space between the sample and filter, at the maximum rated volume. In case of overpipetting, the sample can be easily recovered by dispensing.

Axygen filters are made of ultra high molecular weight (UHMW) polyethylene and contain no PCR inhibitors. All Axygen filter tips are metal-free, RNase-/DNase-free, and nonpyrogenic. They are packaged in sealed-bottom racks with lids and are available in sterile packaging.

Aerosol barrier tips offer the ultimate in protection against contamination. Their use is particularly appropriate in mission critical applications such as PCR, DNA sequencing, and other techniques involving the use of vaporous, radioactive, biohazardous, or corrosive materials.

Autoclaving Guidelines

To ensure successful steam sterilization of your plastic labware, please adhere to the following guidelines:

- 121°C** Autoclave all plastic consumables at 121°C for 15 minutes, 15 psi/1 atm.
- 15 minutes** Do not use a dry cycle, as this may cause deformation or weakening of the plastic.
- 15 psi/1 atm** Allow temperature within the autoclave to return to at least 80°C before removing the product.

Autoclaving Caution

Excessive exposure to autoclaving heat may cause warping or decreased structural integrity. Do not exceed autoclaving recommendations.

NOTE: Not all products are autoclavable. Please see product's respective information sheets.

Tip Refill System

The Axygen® tip refill system contains a durable refill rack that can be easily refilled by hand and is autoclavable. These translucent racks include a color-coded insert for easy tip identification.

- ▶ Graduated 200 µL tip offers visual volume check
- ▶ Translucent rack offers tip visibility
- ▶ Tip insert “clicks” into rack for added product security
- ▶ RNase-/DNase-free
- ▶ Nonpyrogenic

Overview – PCR Consumables

Corning's extensive line of Axygen® PCR products are specifically designed for use within standard, gradient, and real-time PCR applications. A wide variety of sizes, configurations, and colors help researchers organize this multi-step process.

Axygen PCR products offer ultra-thin and consistent wall thickness which allows for precise thermal transfer along the entire surface of the tube. The unique cap design ensures a perfect fit to reduce sample evaporation during thermal cycling. Our tubes and microplates are manufactured using high-end polished molds and are free from endonucleases, pyrogens, lubricants, dyes, heavy metals, and fillers.

- ▶ Available in a wide variety of sizes, configurations, and colors
- ▶ 0.2 mL and 0.5 mL tubes and PCR microplates fit most popular thermal cyclers (see Compatibility Chart)
- ▶ Ultra-thin and consistent wall thickness allows for precise thermal transfer, leading to shorter cycle times and more consistent results
- ▶ Available with domed caps for efficient heat transfer from the thermal cycler's lid or flat cap for easy piercing and labeling
- ▶ Unique cap design reduces sample evaporation
- ▶ RNase-/DNase-/human gDNA-free
- ▶ Nonpyrogenic
- ▶ Bar coding is available on selected skirt microplates

Axygen® PCR Tubes

PCR tubes require a thin and consistent wall thickness to reduce the insulating effect of the tube. Axygen PCR tubes are manufactured to the highest quality standards so your results will be consistent every time. PCR tubes with a short cap may allow for sample evaporation during thermal cycling. Axygen PCR tubes are sealed with a full-length, even, insertion cap which ensures a tight fit and reduces sample evaporation.

Axygen products are manufactured in a ISO 13485 certified facility and are RNase-/DNase-free, human gDNA-free, and nonpyrogenic.

For more information about plate sealing see Sealing Solutions Section.

Automation-compatible PCR Microplates

A unique, one material automation-compatible PCR microplate that sustains flatness post-thermal cycling, has raised-angled rims for improved sealing, and has grid lines for better sample traceability.

- ▶ Rigid frame with a split in frame relieves stress during thermal cycling
- ▶ Clear and ultra-thin walls provide even heat transfer
- ▶ Grid improves support and rigidity
- ▶ Sealing options: Axygen® AxyMat, adhesive films, flat and domed cap strips
- ▶ Compatible with most popular thermal cyclers, liquid handlers, and sequencers (Applied Biosystems, BioRad, Eppendorf, Beckman, Hamilton, Tecan, Agilent, PerkinElmer). See Compatibility Chart for more details.

PCR Tubes

Axygen polypropylene, thin wall PCR tubes with and without caps are designed to fit standard 96-well blocks and are available in an assortment of colors. The consistent and ultra-thin wall allows precise thermal transfer. An even insertion cap ensures a tight fit to reduce evaporation. Available with Axygen Maxymum Recovery® surface.

R-96-PCR-FY	PCR storage rack for 0.2 mL tubes	Fluorescent yellow	5/pk, 5 pk/cs

PCR Strip Tubes and Caps

Axygen® thin wall PCR strip tubes are designed to fit a variety of thermal cyclers. The consistent and ultra-thin wall allows precise thermal transfer. An even insertion cap ensures a tight fit to reduce evaporation. Strip tubes are available in an assortment of colors.

Optical flat cap strips feature ultra-clear upper surfaces, ideal for fluorescent luminescent and real-time PCR applications. They offer a light transmittance that is 75% higher than with standard strip caps. Made to seal tube strips and 96-well microplates.

Overview – Storage

Axygen products are manufactured in a clean, controlled “state of the art” facility and are RNase-/DNase-/human gDNA-free and nonpyrogenic.

Corning's Extensive Line of Axxygen® Storage Products

Automation has greatly streamlined many standard lab tasks, including liquid handling and sample manipulation. However, these same methods have also increased the need for precisely engineered and consistently manufactured lab consumables. Count on Corning to be at the forefront of new product R&D and manufacturing improvements, ensuring your complete satisfaction with every item.

Assay Plates and Deep Well Microplates are used for sample collection, *in vitro* growth chambers and long-term storage. Made of polypropylene, they offer excellent chemical resistance and will withstand temperatures down to -80°C.

Single Well and Multiple Well Reservoirs are a complete line of reagent vessels in numerous formats for automated and manual applications. All are designed with standard ANSI/SLAS footprint dimensions for microplates for compatibility with most automation workstations and are made of polypropylene for excellent chemical resistance.

Axygen AxyMat Sealing Mats are proprietary sealing mats designed for high throughput screening and storage applications. Made of research-grade silicone, they can be autoclaved. Following a bleach wash and ethanol rinse protocol, they can be reused. Axxygen AxyMat sealing mats are pierceable and self-sealing, ideal for automated processes, and can be used in sub-zero environments.

Chemically Resistant Axxygen ImpermaMats are a chemical-resistant line of sealing mats made for use in assays involving strong solvents such as DMSO and similarly harsh solvents. Specifically designed for Axxygen deep well standard microplates, they contain no extractables to contaminate samples. These sealing mats are designed to withstand a wide temperature range from -80°C to +121°C, and they are autoclavable and reusable.

Assay Plates and Deep Well Microplates

Axygen® assay and deep well polypropylene plates are used for sample collection, *in vitro* growth chambers, and long-term storage. They offer excellent chemical resistance and will withstand temperatures down to -80°C.

- ▶ Standard ANSI/SLAS footprint with centrifugation to 4,000 RCF
- ▶ Diamond-shaped wells allow complete sample recovery and ultra flat surface ensures proper sealing of heat film
- ▶ Plates and mats are bulk packaged
- ▶ 24-well plates and mats are available in black and white by special order
- ▶ 96-well microplates and mats are clear

Compound Library Storage – Mini Tube System (MTS)

Axygen® Mini tube systems are available in 0.65 mL or 1.1 mL single mini tube. They are also available in 8-cap or 12-cap strip format. Mini tube system racks are compatible with Beckman Coulter, Tecan, and other automation workstations.

- ▶ Rack features a one-way lid design and alpha-numeric grid
- ▶ Molded-in condensation rings on the lid minimize cross contamination

Microcentrifuge Tube Storage Boxes

TR8300

TR8300-BLK

TR8300-A

Axygen® Microcentrifuge Tube Storage Boxes are ideal for sample storage. These polypropylene boxes are engineered to withstand the harsh environments necessary for daily workflows in your laboratory. This includes freezing temperatures at -80°C and autoclaving temperatures up to 121°C to ensure a lasting, durable product. The positive catch on the product anterior keeps the lid securely fastened, whereas the 3-point hinge functions to maintain its integrity during repeated use located on the product posterior. Sample identification can easily be assigned using the alpha-numeric indexing stamped on the inner perimeter of each box. The clear lids allow visibility when the lid is closed as this feature pairs well with our microcentrifuge tubes solution noted within the accessories section. Boxes are available in a variety of colors for coding samples and holds 100 x 1.5 to 2.0 mL tubes, cryogenic vials, or chromatography vials. A solid black box, including the lid, is available for light-sensitive samples (142 x 142 x 55 mm).

All Axxygen Microcentrifuge Tube Storage Boxes come with a strategically placed alpha-numeric manufactured stamp to easily distinguish sample identification.

Microcentrifuge Tube Support Rack

The Axxygen Microcentrifuge Tube Support Rack is molded from durable, autoclavable polypropylene, and features non-skid rubber feet. The rack has two levels and exhibits wide spacing to provide prime sample access and visibility. Tube positions are numbered 1 to 20 for organizing samples (210 x 75 x 35 mm).

- ▶ Step design allows easy access to tubes
- ▶ 2 rows of 10 (20 x 1.5 to 2.0 mL total)

Overview – Sealing Solutions

Axygen products are manufactured in a clean, controlled “state of the art” facility and are RNase-/DNase-/human gDNA-free and nonpyrogenic.

For applications ranging from PCR and Real-time PCR to ELISA and cell culture, Axygen® sealing films are the easy and cost effective way to seal your microplates. Available in sticky sheets, heat seal sheets, or heat seal rolls.

- Lids are available in polypropylene and polystyrene and provide an easy way to cover most microplates
- An extensive range of ImpermaMats offer excellent protection for applications involving aggressive solvents
- Sealing films offer great economy for disposable use
- Axygen AxyMat and ImpermaMat sealing mats are autoclavable and reusable
- Films and mats can be used in a wide temperature range

Plate Sealing

Each “well-sealer” incorporates a “scored” area for puncturing by a syringe needle which allows samples to be dispensed and/or aspirated even while the Axygen AxyMat is in place. Once punctured each ‘well-sealer’ will reseal itself, ensuring an airtight seal to the well.

Corning offers an extensive array of Axygen plate sealing options suitable for any preference or application.

PCR Axygen AxyMat sealing mats are research-grade silicone sealing mats designed for long- or short-term sample storage and PCR. They are autoclavable and reusable.

Compression and expansion Axygen AxyMat sealing mats are ideal for sealing microplates during thermal cycling. Thicker than PCR Axygen AxyMat sealing mats, these form an optimal seal between the cycler's heated lid and the wells, eliminating evaporation and well-to-well contamination. They are autoclavable and reusable.

Axygen 8-strip caps applied to multiwell microplates offer a quick and effective way to seal selected rows and subsequently access individual wells.

HeatSeal is ideal for PCR applications as it eliminates evaporation and well-to-well contamination. It is also useful for sample storage and transport.

AluminumSeal and PolyesterSeal is designed for high throughput screening applications, but is also popular for long-term storage, transport, and PCR.

Axygen® AxyMat Sealing Mats

Axygen AxyMat sealing mats can be used in a wide range of temperatures for PCR and storage applications. Axygen AxyMat sealing mats minimize evaporation and are made of research-grade silicone which can be autoclaved. They can be reused following a bleach wash and ethanol rinse protocol.

Axygen® ImpermaMat Sealing Mats

Axygen ImpermaMat sealing mats can be used in a wide range of temperatures for PCR and storage applications. ImpermaMats minimize evaporation and are made of research-grade silicone which can be autoclaved. They can be reused following a bleach wash and ethanol rinse protocol. ImpermaMats are chemically resistant sealing mats that provide a high degree of confidence for storage applications involving more aggressive solvents. They do not contain any adhesives or extractables which could contaminate samples.

- ▶ Chemically resistant
- ▶ Designed for use with Axxygen deep well and assay microplates
- ▶ Tight plate seal reduces sample evaporation and well-to-well contamination
- ▶ Usable within a wide temperature range, from -80°C to +121°C
- ▶ High contrast alphanumeric grid for easy well identification

Overview – Microcentrifuge Tubes

Axygen® MaxyClear SnapLock Microcentrifuge Tubes

Axygen MaxyClear 1.5 mL, 1.7 mL, and 2.0 mL SnapLock microcentrifuge tubes are engineered to close with a snap and stay closed during centrifugation up to 14,000 RCF. The 1.7 mL MaxyClear microcentrifuge tubes are a co-polymer material which offers exceptional strength and chemical resistance. All Axxygen SnapLock microcentrifuge tubes have frosted cap surfaces for labeling, frosted panels on the side for writing, and a 0.28 mm piercing port in the center of the cap. Most microcentrifuge tubes are autoclavable. Axxygen microcentrifuge tubes are produced from virgin polypropylene that meets USP Class VI requirements.

- MaxyClear for the ultimate in sample visibility found in all of Axxygen SnapLock microcentrifuge tubes
- A wide range of colored tubes for easy sample identification
- SnapLock tubes are guaranteed to stay closed even during boiling or autoclaving
- Will withstand up to 14,000 RCF
- SnapLock cap assures efficient seal yet is still easy to flip open
- Thin membrane in cap center allows easy access to sample by syringe needle
- RNase-/DNase-free
- Nonpyrogenic
- Axxygen Maximum Recovery® surface is available in most styles for minimal sample retention

Axygen products are manufactured in a clean, controlled “state of the art” facility and are RNase-/DNase-free and nonpyrogenic.

Axygen® MaxyClear Screw Cap Microcentrifuge Tubes

Axygen MaxyClear screw cap microcentrifuge tubes serve a broad range of laboratory needs including collection, processing, centrifugation, long-term storage and packaging/shipping of restriction enzymes, and other reagents. Color-coded caps provide a syringe port which is easily pierced for radioisotope labeling and fraction collecting. The threaded O-ring design ensures a uniform closure allowing centrifugation up to 14,000 RCF.

The closure on Axxygen screw caps feature an O-ring that is formulated and manufactured from a specially selected material that is resistant to many commonly used laboratory chemicals.

Autoclaving Guidelines

To ensure successful steam sterilization of your plastic labware, please adhere to the following guidelines:

121°C

Autoclave all plastic consumables at 121°C for 15 minutes, 15 psi/1 atm.

15 minutes

Do not use a dry cycle, as this may cause deformation or weakening of the plastic.

15 psi/1 atm

Allow temperature within the autoclave to return to at least 80°C before removing the product.

Autoclaving Caution

Excessive exposure to autoclaving heat may cause warping or decreased structural integrity. Do not exceed autoclaving recommendations.

NOTE: Not all products are autoclavable. Please see product's respective information sheets.

Microcentrifuge Tube Packaging

Axygen microcentrifuge tubes are shipped in resealable plastic bags and are packed in individual boxes, keeping them free from contaminants and easy to store.

Axygen® SnapLock Microcentrifuge Tubes

Axygen SnapLock microcentrifuge tubes are available in a variety of colors, sterilized, and with our Axxygen Maxymum Recovery® surface. All Axxygen SnapLock microcentrifuge tubes have a frosted cap for easy labeling, a frosted panel on the side of the tube for easy writing, and a pierceable port in the center of the cap for use with a syringe.

- ▶ 0.6 mL, 1.5 mL, and 2.0 mL (homopolymer) tubes are boil proof and autoclavable
- ▶ 1.7 mL (copolymer) tubes offer exceptional strength and chemical resistance
- ▶ Maximum RCF is 14,000 x g
- ▶ Sterility Assurance Level (SAL) of 10⁻⁶
- ▶ RNase-/DNase-free and human gDNA-free
- ▶ Nonpyrogenic

Overview – Sample Prep Solutions for Genomics

The purification of high quality DNA/RNA is the first essential step for any genomics-based downstream application. Poor quality may contribute significantly to the failure of downstream applications and thus delay research and increase overall research costs.

There is little room for error when processing these samples, so utilizing a high quality nucleic acid purification technology becomes essential.

Corning has a comprehensive range of magnetic beads-based isolation reagents. The Axygen® AxyPrep Magnetic (MAG) Bead Purification Kits utilize a unique paramagnetic bead-based chemistry for the purification and clean-up of nucleic acids for many genomics downstream applications such as DNA sequencing, genotyping, and gene expression. Free of major hazardous chemicals, our products do not compromise on performance featuring high quality, high yields, excellent sample concentration, and long sequencing reads. Additionally, this makes our MAG kits easy to transport and store.

Axygen IMAG Magnetic Separation Devices (MSD) and AxyPrep Magnetic Bead Purification Kits cut the total separation process and labor by up to 50%. IMAG MSDs are available in tube (IMAG-12T) or 96-well microplate format (IMAG-96P). They enable manual users to process any magnetic beads-based purification or clean-up process as easily and conveniently as automation users for use in biological research, including nucleic acid purification and clean-up, cell-based assays, and antibody and protein purification.

Our kits have been adopted by life science research institutes worldwide and continue to generate satisfaction and compliments from our customers for their excellent quality and performance.

Axygen® AxyPrep MAG Tissue-Blood gDNA Kit

Applications

- ▶ Restriction enzyme digestion
- ▶ DNA sequencing
- ▶ Genotyping
- ▶ PCR amplification

One Kit for Multiple Sample Types

The Axygen AxyPrep MAG Tissue-Blood gDNA Kit utilizes a magnetic beads-based technology to isolate genomic DNA from rodent tail tissues. This protocol provides instruction to extract gDNA from fresh or frozen rodent tails. The protocol is performed in 96-well format and 1.5 mL tubes. Purification begins by the addition of lysis buffer, and Proteinase K to rupture cell membranes and digest protein. Genomic DNA is then immobilized on magnetic particles by the addition of a magnetic binding reagent. This differential binding allows the gDNA to be easily separated from contaminants using a magnetic field. Contaminants can then be rinsed away using a simple washing procedure.

Axygen® AxyPrep MAG Plasmid Kit

The Axygen AxyPrep MAG Plasmid Purification Kit utilizes a magnetic beads-based technology for high throughput purification of plasmid DNA from *Escherichia coli* cells. The AxyPrep MAG Plasmid Kit can also be used with fosmid and BAC vector-based constructs ranging from 5 Kb to 150 Kb. The system consists of steps of pelleting cells, resuspension, lysis, neutralization, DNA binding, ethanol washing, and plasmid elution. The protocol is automation-compatible.

RNA contamination causes inaccurate plasmid yields. No RNA contamination is visible with the Axygen AxyPrep MAG Plasmid Kit when compared to the comparative.

- ▶ Restriction enzyme clean-up

Axygen® AxyPrep MAG Plant Genomic DNA Extraction Kit

The Axygen AxyPrep MAG Plant gDNA Extraction Kit is a magnetic beads-based purification system that allows rapid and reliable isolation of high quality gDNA from a wide variety of plant samples. Up to 96 samples (50 mg fresh tissue per sample or 15 mg of dried tissue per sample) can be processed in less than one hour. The AxyPrep MAG Plant gDNA Extraction Kit efficiently eliminates polysaccharides, phenolic compounds and enzyme inhibitors with no organic extractions. This kit is adaptable for use on major liquid handling workstations for high throughput processing.

- ▶ Simplified extraction process
- ▶ Non-alcohol-based purification
- ▶ Compatible with genomics downstream applications
- ▶ High quality, high-yield DNA
- ▶ Manual and automation-friendly

Axygen® AxyPrep MAG PCR Clean-up Kit

The Axygen AxyPrep MAG PCR Clean-up Kit is designed for efficient removal of unincorporated dNTPs, salts, and enzymes after any post-PCR. These contaminants are detrimental to the success of downstream applications such as genotyping Sanger and next generation sequencing. The AxyPrep MAG PCR Clean-up Kit utilizes a unique paramagnetic bead technology for quick high-throughput purification of PCR amplicons. AxyPrep MAG PCR Clean-up utilizes an optimized buffer to selectively bind PCR amplicons of 60 to 100 bp or >100 bp to paramagnetic beads, providing end users flexibility and high recovery options with efficient primer-dimer removal based on their downstream application needs. The protocol mainly consists of binding, washing, and elution steps. Primers, nucleotides, salts and enzymes in PCR mixture are removed during the binding and washing steps. The purified PCR product is essentially free of contaminants.

- Flexible clean-up: High recovery of amplicons with the option to choose recovery of >60 bp or >100 bp
- Efficient removal of unincorporated dNTPs, primers, primer dimers, salts, and other contaminants
- Manual and automation-compatible protocol
- Processing time: 15 minutes/96 samples
- No centrifugation or filtration required

Axygen® AxyPrep MAG PCR Normalizer Kit

Applications

- ▶ Sanger sequencing
- ▶ Next Generation sequencing

The Axygen AxyPrep MAG PCR Normalizer Kit utilizes a paramagnetic beads-based purification system for post-PCR clean-up. AxyPrep MAG PCR Normalizer beads have limited binding surface, therefore by limiting the amount of beads added in a given purification reaction, pre-defined amount of DNA can be isolated based on customers need. PCR normalization is accomplished during this purification process so that additional DNA quantification and dilution are not necessary. Time, labor, and reagent cost are greatly saved with the AxyPrep MAG unique normalization purification chemistry, therefore efficiently streamlining genomics downstream applications. The protocol mainly consists of binding, washing, and elution steps, and it can be performed directly in the thermal cycling plate and requires no centrifugation or filtration. The process can be automated with walk away solution for high throughput applications.

- ▶ Dual action: Normalization and post PCR clean-up enables significant reduction in processing and faster turnaround times
- ▶ Scalable: Tube, 96- and 384-well microplate formats
- ▶ Manual and automation-compatible protocol
- ▶ Compatible with several downstream applications
- ▶ No centrifugation or filtration required

Dual action: Post-PCR product normalization and clean-up. Regardless of the post-PCR product volume or concentration added to the Axygen AxyPrep MAG PCR Normalizer, the output would be a normalized PCR product to the desired concentration without primer dimer, free dNTPs, or salts carry over.

Applications

- ▶ Illumina Next Generation sequencing
- ▶ Life Technologies (Ion Torrent) fragment size selection
- ▶ Library construction

Axygen® AxyPrep MAG FragmentSelect-I Kit

Post DNA shearing, the library construction process for next generation sequencing mostly requires fragment selection regardless of the platform. Obtaining high recovery post-fragment selection is becoming an important contributor for the reduction of sequencing bias. The Axygen AxyPrep MAG FragmentSelect-I Kit is optimized for Illumina® next generation sequencing platforms and Life Technologies (Ion Torrent) fragment size selection needs in next generation sequencing (NGS) library construction workflow. The AxyPrep MAG FragmentSelect-I Kit utilizes a unique paramagnetic bead technology for quick high throughput optimized DNA size selection suitable for various next generation sequencing platforms.

- ▶ AxyPrep MAG FragmentSelect-I Kit optimized fragment selection chemistries for Illumina and Ion Torrent
- ▶ Versatile and flexible sequential fragment size selection: No gels needed
- ▶ Efficient removal of primer-dimers: No need for further clean-up steps
- ▶ Manual and automation-compatible
- ▶ Scalable: Tube, 96- and 384-well microplate formats
- ▶ No centrifugation or filtration required

Axygen® AxyPrep MAG DyeClean Up Kit

Applications

- Sanger sequencing

Excess dye terminator clean-up is an essential step prior to sequencing. The carry-over of excess dye into sequencing results in dye blobs, which leads to overwhelming noise and failed calls of sequenced bases and potentially leading to the failure of the sequencing run. The Axygen AxyPrep MAG DyeClean utilizes a unique paramagnetic bead-based sequencing purification system optimized for the clean-up of excess dye terminator post-sequencing reaction in Sanger sequencing. The protocol mainly consists of binding, washing and elution steps, and can be performed directly in the thermal cycling plate and requires no centrifugation or filtration.

- Saving time and money: Significant BigDye savings without incurring extra cost and processing time with the unneeded BigDye signal enhancer buffer, while maintaining high QV20+ scores
- High signal to noise ratio resulting in long reads and high QV20+ scores
- Suitable for the clean-up of sequencing reaction of different Sanger sequencing-based platforms – ABI® Prism 3730, 3730xl, 3700, 3130, 31030xl, and 3100 – GE Healthcare MegaBACE
- Simple and easy sequencing reaction clean-up process: 25 min./96 samples
- No centrifugation or filtration required

Savings Achieved on BigDye Without the Need for a Signal Enhancer While Maintaining High QV20+ Scores. The QV20+ scores achieved indicates that there is no need for the use of the BigDye Signal Enhancer buffer (MCLab) when AxyPrep MAG DyeClean is utilized for the post-sequencing reaction clean-up. Sequencing reactions were performed with plasmid and primer provided in the BigDye v3.1 kit. The sequencing reactions contained 250 ng of pGEM 3Zf(+) control plasmid, 3.2 pmol of M13(-21) primer and the indicated amount of BigDye v3.1 in a final volume of 10 µL. The samples were processed on ABI 3730xl.

Axygen® IMAG™ Handheld Magnetic Beads Separation Devices

The use of magnetic separation devices (MSDs) are essential in any paramagnetic beads-based purification process. Traditionally, MSDs are not optimized for manual use and most require electrically powered liquid handling systems. IMAG MSDs are available in tube or microplate format and are designed to simplify the manual processing of magnetic bead separations, including nucleic acid purification and clean-up, cell-based assays, and antibody and protein purifications.

- ▶ IMAG MSDs accommodate single tube or 96-well microplate formats
- ▶ Fast separation time
 - Strong magnets enable less than 30-second separation times
 - Holds tubes or microplate enabling fast wash steps
- ▶ Manual operation enables low or high throughput

Axygen® Gel Documentation Systems

Axygen Gel Documentation System-BL

Axygen Gel Documentation System

Axygen Gel Documentation systems easily capture publication quality, 16 bit TIFF images. The systems are quick to set up and have an intuitive user interface for image capture, annotation, and contrast adjustment. Images are easily saved and opened in common gel analysis software for more detailed analysis.

- ▶ Auto exposure—you never have to manually manipulate the camera
- ▶ Ready-to-use—just connect the computer* and load the software
- ▶ Long-life dual wavelength transilluminators
- ▶ Exceptionally high resolution (5.4 MP) camera
- ▶ The cabinet is compact with an ultra-violet (UV) cut-off switch to prevent exposure to UV light if the cabinet door is opened while the UV light is on.

Choose from Two Axxygen Gel Documentation Systems

The **Axygen Gel Documentation System** is an ideal system for labs that want good value without compromising ease of use or image quality. It includes a dual-wavelength transilluminator, 5.4 MP image resolution camera, and image acquisition software (PC not included).

The **Axygen Gel Documentation System-BL** has all the features of the standard Axxygen Gel Documentation system, as well as built-in blue lights and a built-on Microsoft® Windows® tablet. The blue lights are designed for use with EtBr replacement dyes to prevent damage to DNA that will be excised for subsequent analysis.

- ▶ Darkroom tab lets you select from UV 302, UV 365, Epi White, or Epi Blue (BL system only) light sources, as well as an optional Trans White light illumination tray.
- ▶ Auto Exposure tool calculates the optimal exposure time with just a single click. You can also use the Slider tool to manually adjust the exposure time and view an updated live image.
- ▶ Select ROI tool allows you to select a region of interest. The Auto Exposure calculations are only based on the selected region. This feature is especially useful for gels that have either intense or faint bands.
- ▶ Band Excision tool allows you to temporarily override the safety precautions in the system to view the gel with the lights on.**
- ▶ Imaging tools include crop, rotate, resize, contrast, saturation, and zoom. Annotation tools include a variety of text and drawing tools. Finished images can be saved, printed, emailed, or exported for further analysis.
- ▶ Transillumination bulbs last for 30,000 hours—which equals over 3.5 years if the bulbs were in continuous use.

*BL model includes tablet computer.

**Always wear protective eyewear when working with UV light.

Everything You Expect From a High Resolution Gel Doc System—Except the High Price.

Axygen® Horizontal Gel Boxes

Axygen horizontal gel boxes are high quality, full featured units designed for exceptional durability and efficiency. The gel boxes feature leak-free external gel casting, which allows you to cast one gel outside of the box while another gel is running inside. The units are available in four different sizes, and each unit comes with two sizes of gel trays. In addition, they have easy to replace electrodes that are recessed to reduce potential damage. These gel boxes are an excellent value that will provide years of reliable service.

- Flexibility – each unit comes with 2 sizes of gel trays to optimize applications.
- External gel casting to gel box allows for running gels while casting the next one.
- Ease of use – the Axxygen contrast enhancer makes loading gels easier.
- Rugged injection molding is supported by a 3-year warranty.
- Larger units come with recirculation ports allowing for buffer exchange.

Axygen® Horizontal Gel Boxes

Four sizes of horizontal tanks. Each comes with 2 sizes of gel trays which allow for external gel casting. Three larger sizes come with recirculation ports for use as needed.

Axygen® Power Supplies

PS300GP and PS250HA Ideal for most of your electrophoresis needs

The Axxygen Power Supplies are full-featured power sources ideal for molecular biology workflows including DNA, RNA, and protein gel electrophoresis applications, as well as blotting. The compact user interface has 4 sets of color-coded terminals allowing for use with up to 4 gel boxes simultaneously. Depending on the model, operating modes include constant voltage, current, or power all with automatic crossover feature. The Power Supplies feature an easy to set, LCD backlit, digital display to perform according to the needs of your operational parameters. The PS250HA has the ability to set programs with 10 steps per program. Both units have timers, are stackable, and are engineered with safety in mind to meet the requirements that today's protocols demand.

PS250HA

- ▶ High amperage optimal for Western blotting
- ▶ Programmable

PS300GP

- ▶ Ideal for small format protein gels or DNA horizontal gels
- ▶ Easy to run constant mode for consistent Voltage or Amperage protocols

Axygen® MaxyGene II Thermal Cyclers

The Axxygen MaxyGene II Thermal Cycler brings increased speed and advanced features, providing the premium performance you have come to expect from Axxygen brand products.

- ▶ Unique flexible programming
- ▶ Rapid run times
- ▶ Improved workflow over traditional gradient cyclers
- ▶ Ramping rates up to 5°C/sec.
- ▶ Simple user interface
- ▶ Adjustable heated lid accommodates strips, tubes, and microplates
- ▶ Pre-programmed standard protocols
- ▶ 3-year warranty

Simplified Workflow for Improved Throughput

The Axxygen MaxyGene II Thermal Cycler is extremely simple to program, compact in design, and built to perform (Figure 1). It makes method optimization affordable and provides consistent, reliable results. Precision Thermal Control provides rapid heating and cooling of the precision-machined sample block by six independently temperature-controlled Peltier modules. A sophisticated algorithm program calculates sample temperature and triggers heating and cooling accordingly, minimizing over- and under-shooting.

The MaxyGene II Thermal Cycler may be programmed to operate between one and six different annealing temperatures across the block (Figure 2). This thermal cycler provides improved throughput by reducing time and simplifies workflow by reducing steps.

Figure 1. MaxyGene Thermal Cycler Screen

Figure 2. Primers designed to anneal to various genes (e.g., Gene A, B, and C) typically have different annealing temperatures (T_1 , T_2 , and T_3). The Axxygen MaxyGene II thermal cycler can perform up to six different reactions, significantly reducing steps and time.

A variety of applications can be performed with the Axygen® MaxyGene II thermal cycler, from single temperature soaks to sophisticated multi-step programs. All of these are easily set up. The time or temperature of a cycling step can be automatically increased or decreased during successive cycles. This is useful for “touchdown” applications and for extending annealing times as enzyme is depleted. Programs may also be paused while running. During operation, actual times and temperatures are displayed. Estimated run times are automatically calculated, and a log of the last run can be displayed or downloaded to a printer or PC.

Axygen® PlateMax™ Semi-automatic Plate Sealers

Easy-to-set time and temperature settings

Compact Footprint

The Axygen PlateMax semi-automatic plate sealer is ideal for the low to medium throughput laboratory that requires uniform and consistent sealing of microplates. Sealing parameters are set and displayed via the user-friendly control panel and the sealing operation is automated to ensure consistent results.

Intuitive Layout

The PlateMax sealer control system features an intuitive layout with settings for all types of plates and sealing materials. The Mode button selects sealing time or temperature, and the control knob adjusts the setting.

Temperature can be precisely set in increments of 1°C and time in increments of 0.1 seconds. The PlateMax has a power saving option that turns the heater off if not in use. For those labs that choose to turn this function off, you can have the PlateMax ready to run all day.

- Accepts a wide range of microplates and heat seals
- User-friendly control system
- Large digital display shows all operating parameters
- Adjustable sealing temperature
- Precise temperature, timing, and pressure for consistent sealing

Simple 3-step Operation

1. Set time and temperature.
2. Place a microplate in the open drawer.
3. Place a heat seal on top of the plate and press the "SEAL" button.

Versatile and Convenient

The PlateMax sealer accepts a wide variety of plate types and heights. An aluminum adapter is used for PCR and standard assay plates. The motorized heated platen automatically adjusts for different plate heights and provides uniform pressure to ensure a quality seal. The platen incorporates a special non-stick coating. The side access door allows for easy cleaning.

Safe

The internal heating elements are situated inside the instrument casing and an internal safety door prevents access to the heated area. In addition, the motorized drawer features safety switches. If a hand or object obstructs the closing drawer, the drawer motor will reverse. This feature protects both the user and the instrument.

Axygen® Axyspin Refrigerated Microcentrifuges

The Axyspin refrigerated microcentrifuge is a high performance refrigerated microcentrifuge designed to quickly process samples for applications such as nucleic acid and protein preparation, purifications, extractions, and pelleting.

- ▶ Powerful refrigeration system cools to 4°C in 8 minutes
- ▶ 24 x 1.5/2.0 mL aluminum rotor included
- ▶ Exceptionally quiet and compact

Axygen Axyspin Refrigerated Microcentrifuge

The Axyspin refrigerated microcentrifuge combines a powerful yet silent, brushless drive with an efficient cooling system, all in a compact footprint. Brushless drive technology has been fine-tuned in the Axyspin refrigerated microcentrifuge to deliver fast acceleration and deceleration of the solid aluminum rotor. The uniquely designed 24-place rotor allows easy access to the tops of sample tubes. Starting from room temperature, the chamber of the Axyspin refrigerated microcentrifuge cools to 4°C in just 8 minutes. The control panel features a backlit LCD display, which allows users to easily view running parameters while the large control knob facilitates digital setting of rotor speed, run time, and temperature. These high performance features allow for faster sample processing and less down time.

The rotor of the Axyspin refrigerated microcentrifuge can accommodate 1.5 and 2.0 mL Axyspin microcentrifuge tubes, including the most popular catalog numbers (MCT-150-C and MCT-200-C).

Axygen® Axypet® Pro Single- and Multi-channel Pipettors

Axygen Axypet Pro Pipettors have been engineered to provide the highest levels of comfort, accuracy, and precision. The lightweight construction, contoured handle, and 4-digit counter were designed to ensure comfortable pipetting. All pipettors feature smooth plunger movement and extremely low pipetting forces to reduce wrist strain and fatigue (RSI). Colored pushbuttons enable easy size identification and reduce the risk of cross-contamination.

- ▶ Ergonomic handle design is a perfect fit for both the right and left hand
- ▶ Convenient one-hand volume setting with auto-lock system prevents accidental volume change during work
- ▶ 4-digit counter provides greater precision and is perfectly positioned for visibility at all times
- ▶ Single-channel pipettors are compatible with very narrow tubes
- ▶ Fully autoclavable and UV-resistant for sample protection against contaminations
- ▶ The multi-channel shafts retract individually for perfect tip loading and easier tip ejection
- ▶ Unique ejector lever system enables effortless tip ejection
- ▶ Easy in-lab calibration helps you quickly adjust your pipettor to various liquid types
- ▶ Individually tested and supplied with a certificate of quality
- ▶ 3-year warranty

Axygen Axypet Pro Starter Kit

Axygen Axypet Pro Starter Kit contains four variable volume pipettors in the most popular and universal volumes (0.5-10 µL, 2-20 µL, 20-200 µL, and 100-1000 µL), pipettor stand for four pipettors, and 3 racks with tips.

Axygen® Axypet® Single- and Multi-channel Pipettors

Axygen Axypet pipettors combine high levels of accuracy and precision with design innovations to make pipetting more comfortable during prolonged periods of time.

- ▶ Thumb-friendly soft spring pipetting system reduces fatigue
- ▶ Unique side EZject button option reduces thumb movement*
- ▶ Large ergonomic push button is easy on the thumb during contact
- ▶ Locking feature prevents accidental volume changes during pipetting procedures
- ▶ Micrometer is continuously adjustable for selection of whole or fractional volumes

Additional multi-channel pipettor features:

- ▶ Curved ejector bar allows tips to be ejected in steps, reducing the amount of force required for ejection
- ▶ Tip manifold rotates 360°
- ▶ Shafts withdraw when pressed against a row of tips
- ▶ Each shaft moves independently, minimizing jamming of tips

Axygen® MotoPet™ Pipet Controller

Pressure sensitive trigger buttons control rate of aspiration or dispensing.

The Axygen MotoPet is a precise, motor powered, rechargeable pipet controller for volumes ranging from 0.5 mL to 100 mL. The unit has an ergonomic design and a highly efficient motor for fast aspiration and dispense of samples as large as 100 mL and full control and precision while dispensing volumes as small as 0.5 mL. It is compatible with both glass and plastic pipets.

- Molded, lightweight handle for effortless pipetting even during extended use.
- Easily accessible switches allow you to choose the optimal operation mode depending on the volume and viscosity of the sample.
- PTFE filter prevents liquid from entering the unit.

Specifications

Volume Range	0.5 mL to 100 mL
Weight	230 g
Speed Settings	2 (high and low)
Dispensing Modes	2 (gravity and blow-out)
Filter	PTFE
Power Source	NiMH battery, up to 8 hours of continuous work
Sterilization	Nose piece, pipet holder, and filter are autoclavable

Battery charging station included.

PTFE filter protects samples from cross-contamination. The filter is autoclavable.

Digital display provides visual indication of battery condition, motor speed, and operating function.

Aspiration speed can be set to HIGH or LOW to adjust for the volume of the pipet and viscosity of the liquid.
