FGFR1 & CTNNB1 Protein Protein Interaction Antibody Pair

Catalog #: DI0122 規格:[1 Set]

List All

Specification

Product Description:

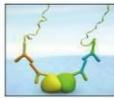

This protein protein interaction antibody pair set comes with two antibodies to detect the protein-protein interaction, one against the FGFR1 protein, and the other against the CTNNB1 protein for use in *in situ* Proximity Ligation Assay. See Publication Reference below.

Application Image

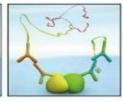

In situ Proximity Ligation Assay (Cell)

 Incubate with target primary antibodies

2. Add PLA probes PLUS and MINUS

3. Hybridize connector oligos

 Ligation to form a complete DNA circle

Rolling circle amplification

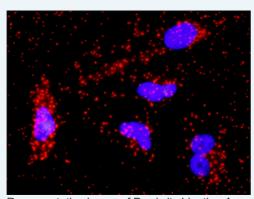

Add fluorescent probes
to reveal interaction

Reactivity:

Human

Quality Contro

Quality Control Protein protein interaction immunofluorescence result.

Representative image of Proximity Ligation Assay of protein-protein interactions between FGFR1 and CTNNB1. HeLa cells were stained with anti-FGFR1 rabbit purified polyclonal antibody 1:1200 and anti-CTNNB1 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware (BlobFinder) download from The Centre for Image Analysis at Uppsala University.

Supplied Product:

Antibody pair set content:

- 1. FGFR1 rabbit purified polyclonal antibody (20 ug)
- 2. CTNNB1 mouse monoclonal antibody (40 ug)

*Reagents are sufficient for at least 30-50 assays using recommended protocols.

Storage Instruction:

Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -

20°C storage immediately after use.

MSDS:

Applications

In situ Proximity Ligation Assay (Cell)

CTNNB1 FGFR1

Gene Information

Entrez GeneID: 2260

Gene Name: FGFR1

Gene Alias: BFGFR,CD331,CEK,FGFBR,FLG,FLJ99988,FLT2,HBGFR,KAL2,N-

SAM

Gene fibroblast growth factor receptor 1

Description:

Omim ID: <u>101600, 123150, 136350, 147950</u>

Gene Ontology: Hyperlink

Gene Summary: The protein encoded by this gene is a member of the fibroblast growth

factor receptor (FGFR) family, where amino acid sequence is highly conserved between members and throughout evolution. FGFR family members differ from one another in their ligand affinities and tissue distribution. A full-length representative protein consists of an extracellular region, composed of three immunoglobulin-like domains, a single hydrophobic membrane-spanning segment and a cytoplasmic tyrosine kinase domain. The extracellular portion of the protein interacts with fibroblast growth factors, setting in motion a cascade of downstream signals, ultimately influencing mitogenesis and differentiation. This particular family member binds both acidic and basic fibroblast growth factors and is involved in limb induction. Mutations in this gene have been associated with Pfeiffer syndrome, Jackson-Weiss syndrome, Antley-Bixler syndrome, osteoglophonic dysplasia, and autosomal dominant Kallmann syndrome 2. Chromosomal aberrations involving this gene are associated with stem cell myeloproliferative disorder and stem cell leukemia lymphoma syndrome. Alternatively spliced variants which encode different protein isoforms have been described; however, not all variants have been fully characterized.

Gene catenin (cadherin-associated protein), beta 1, 88kDa

Description:

Omim ID: <u>114550, 116806, 132600, 155255</u>

Gene Ontology: Hyperlink

Gene Summary: Beta-catenin is an adherens junction protein. Adherens junctions (AJs; also called the zonula adherens) are critical for the establishment and

maintenance of epithelial layers, such as those lining organ surfaces. AJs mediate adhesion between cells, communicate a signal that neighboring cells are present, and anchor the actin cytoskeleton. In serving these roles, AJs regulate normal cell growth and behavior. At several stages of embryogenesis, wound healing, and tumor cell metastasis, cells form and leave epithelia. This process, which involves the disruption and reestablishment of epithelial cell-cell contacts, may be regulated by the disassembly and assembly of AJs. AJs may also function in the transmission of the 'contact inhibition' signal, which instructs cells to stop dividing once an epithelial sheet is complete.
