TGFA & ERBB2 Protein Protein Interaction Antibody Pair

Catalog # : DI0163

規格 : [1 Set]

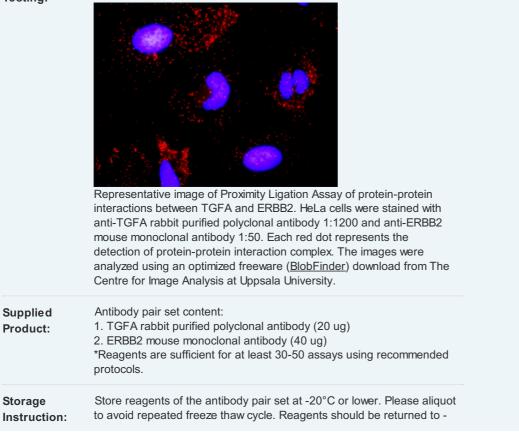

List All

Specification				Application Image
Product Description:	This protein protein interaction antibody pair set comes with two antibodies to detect the protein-protein interaction, one against the TGFA protein, and the other against the ERBB2 protein for use in <i>in situ</i> <u>Proximity Ligation Assay</u> . <u>See Publication Reference below</u> .			<i>In situ</i> Proximity Ligation Assay (Cell)
	1. Incubate with target primary antibodies	2. Add PLA probes PLUS and MINUS	3. Hybridize connector oligos	
	4. Ligation to form a complete DNA circle	5. Rolling circle amplification	6. Add fluorescent probes to reveal interaction	

Reactivity: Human

Quality Control Protein protein interaction immunofluorescence result.

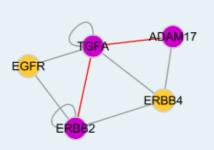

Testing:

	20°C storage immediately after use.				
MSDS:	main and a second secon				
Publication Reference					
 An analysis of protein-protein interactions in cross-talk pathways reveals CRKL as a novel prognostic marker in hepatocellular carcinoma. Liu CH, Chen TC, Chau GY, Jan YH, Chen CH, Hsu CN, Lin KT, Juang YL, Lu PJ, Cheng HC, Chen MH, Chang CF, Ting YS, Kao CY, Hsiao M, Huang CY. Mol Cell Proteomics. 2013 Feb 8. [Epub ahead of print] 					
Applications					
In situ Proximity Ligation Assay (Cell)					
ERBB2 TGFA					
Gene Information	Gene Information				
Entrez GenelD:	7039				
Gene Name:	TGFA				
Gene Alias:	TFGA				
Gene Description:	transforming growth factor, alpha				
Omim ID:	<u>190170</u>				
Gene Ontology	: <u>Hyperlink</u>				
Gene Summary	Transforming growth factors (TGFs) are biologically active polypeptides that reversibly confer the transformed phenotype on cultured cells. TGF-alpha shows about 40% sequence homology with epidermal growth factor (EGF; MIM 131530) and competes with EGF for binding to the EGF receptor (MIM 131550), stimulating its phosphorylation and producing a mitogenic response.[supplied by OMIM				
Other Designations:	transforming growth factor-alpha				
Gene Information					
Entrez GeneID:	2064				
Gene Name:	ERBB2				
Gene Alias:	CD340,HER-2,HER-2/neu,HER2,NEU,NGL,TKR1				
Gene Description:	v-erb-b2 erythroblastic leukemia viral oncogene homolog 2, neuro/glioblastoma derived oncogene homolog (avian)				
Omim ID:	<u>137215, 137800, 164870, 211980</u>				
Gene Ontology: <u>Hyperlink</u>					
Gene Summary	: This gene encodes a member of the epidermal growth factor (EGF) receptor family of receptor tyrosine kinases. This protein has no ligand binding domain of its own and therefore cannot bind growth factors. However, it does bind tightly to other ligand-bound EGF receptor family members to form a heterodimer, stabilizing ligand binding and enhancing kinase-mediated activation of downstream signalling pathways, such as those involving mitogen-activated protein kinase and phosphatidylinositol-3 kinase. Allelic variations at amino acid positions				
	prosphatidyinositor-s kinase. Allelic variations at amino acid positions				

	654 and 655 of isoform a (positions 624 and 625 of isoform b) have been reported, with the most common allele, Ile654/Ile655, shown here. Amplification and/or overexpression of this gene has been reported in numerous cancers, including breast and ovarian tumors. Alternative splicing results in several additional transcript variants, some encoding different isoforms and others that have not been fully characterized. [provided by RefSeq
Other Designations:	c-erb B2/neu protein,erbB-2,herstatin,neuroblastoma/glioblastoma derived oncogene homolog,v-erb-b2 avian erythroblastic leukemia viral oncogene homolog 2 (neuro/glioblastoma derived oncogene homolog)
