PRKCZ & GSK3B Protein Protein Interaction Antibody Pair

Catalog #: DI0225 規格:[1 Set]

List All

Specification

Product Description:

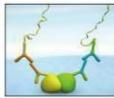

This protein protein interaction antibody pair set comes with two antibodies to detect the protein-protein interaction, one against the PRKCZ protein, and the other against the GSK3B protein for use in *in situ* Proximity Ligation Assay. See Publication Reference below.

Application Image

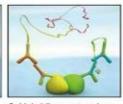

In situ Proximity Ligation Assay (Cell)

 Incubate with target primary antibodies

2. Add PLA probes PLUS and MINUS

Hybridize connector oligos

 Ligation to form a complete DNA circle

Rolling circle amplification

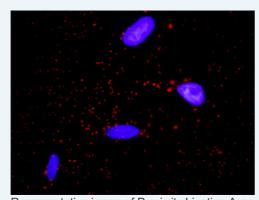

Add fluorescent probes to reveal interaction

Reactivity:

Human

Quality Contro Testing:

Quality Control Protein protein interaction immunofluorescence result.

Representative image of Proximity Ligation Assay of protein-protein interactions between PRKCZ and GSK3B. HeLa cells were stained with anti-PRKCZ rabbit purified polyclonal antibody 1:1200 and anti-GSK3B mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware (BlobFinder) download from The Centre for Image Analysis at Uppsala University.

Supplied Product:

Antibody pair set content:

- 1. PRKCZ rabbit purified polyclonal antibody (20 ug)
- 2. GSK3B mouse monoclonal antibody (40 ug)

*Reagents are sufficient for at least 30-50 assays using recommended protocols.

Storage Instruction:

Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -

Publication Reference

 An analysis of protein-protein interactions in cross-talk pathways reveals CRKL as a novel prognostic marker in hepatocellular carcinoma.
Liu CH, Chen TC, Chau GY, Jan YH, Chen CH, Hsu CN, Lin KT, Juang YL, Lu PJ, Cheng HC, Chen MH, Chang CF, Ting YS, Kao CY, Hsiao M, Huang CY. Mol Cell Proteomics. 2013 Feb 8. [Epub ahead of print]

Applications

In situ Proximity Ligation Assay (Cell)

GSK3B PRKCZ

Gene Information

Entrez GeneID: 5590

Gene Name: PRKCZ

Gene Alias: PKC-ZETA,PKC2

Gene protein kinase C, zeta

Description:

Omim ID: <u>176982</u>

Gene Ontology: Hyperlink

Gene Summary: Protein kinase C (PKC) zeta is a member of the PKC family of

serine/threonine kinases which are involved in a variety of cellular processes such as proliferation, differentiation and secretion. Unlike the classical PKC isoenzymes which are calcium-dependent, PKC zeta exhibits a kinase activity which is independent of calcium and diacylglycerol but not of phosphatidylserine. Furthermore, it is insensitive to typical PKC inhibitors and cannot be activated by phorbol ester. Unlike the classical PKC isoenzymes, it has only a single zinc finger module. These structural and biochemical properties indicate that the zeta subspecies is related to, but distinct from other isoenzymes of PKC. Alternative splicing results in multiple transcript variants encoding

different isoforms. [provided by RefSeq

Designations:

Gene Information

Entrez GeneID: 2932

Gene Name: GSK3B

Gene Alias:

Gene glycogen synthase kinase 3 beta

Description:

Omim ID: <u>605004</u>

Gene Ontology: Hyperlink

Gene Summary: The protein encoded by this gene is a serine-threonine kinase,

belonging to the glycogen synthase kinase subfamily. It is involved in

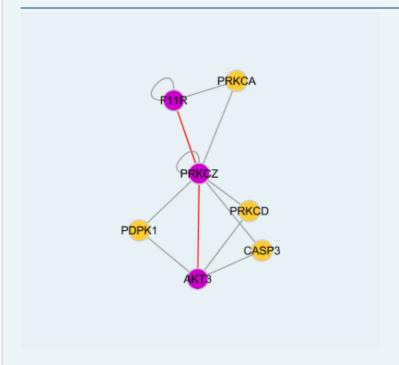

Page 2 of 3 2016/5/19

energy metabolism, neuronal cell development, and body pattern formation. Polymorphisms in this gene have been implicated in modifying risk of Parkinson disease, and studies in mice show that overexpression of this gene may be relevant to the pathogenesis of Alzheimer disease. Alternatively spliced transcript variants encoding different isoforms have been found for this gene

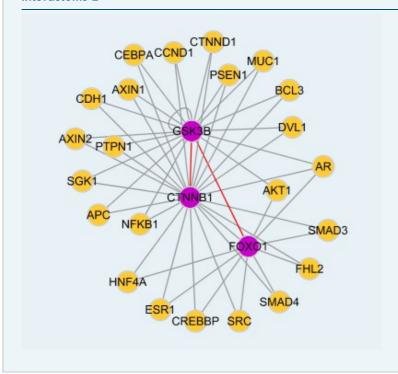

Other Designations:

GSK3beta isoform,glycogen synthase kinase-3 beta
