EGFR & EGF Protein Protein Interaction Antibody Pair

Catalog # : DI0240

規格 : [1 Set]

List All

Specification

Product Description: This protein protein interaction antibody pair set comes with two antibodies to detect the protein-protein interaction, one against the EGFR protein, and the other against the EGF protein for use in *in situ* Proximity Ligation Assay. See Publication Reference below.

Application Image

In situ Proximity Ligation Assay (Cell)

Reactivity: Human

Quality Control Testing: Protein protein interaction immunofluorescence result.

Representative image of Proximity Ligation Assay of protein-protein interactions between EGFR and EGF. HeLa cells were stained with anti-EGFR rabbit purified polyclonal antibody 1:1200 and anti-EGF mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware ([BlobFinder](#)) download from The Centre for Image Analysis at Uppsala University.

Supplied Product: Antibody pair set content:
 1. EGFR rabbit purified polyclonal antibody (20 ug)
 2. EGF mouse monoclonal antibody (40 ug)
 *Reagents are sufficient for at least 30-50 assays using recommended protocols.

Storage Instruction: Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -

20°C storage immediately after use.

Applications

In situ Proximity Ligation Assay (Cell)

[EGF](#) [EGFR](#)

Gene Information

Entrez GeneID: [1956](#)

Gene Name: EGFR

Gene Alias: ERBB,ERBB1,HER1,PIG61,mENA

Gene Description: epidermal growth factor receptor (erythroblastic leukemia viral (v-erb-b) oncogene homolog, avian)

Omim ID: [131550](#), [211980](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is a transmembrane glycoprotein that is a member of the protein kinase superfamily. This protein is a receptor for members of the epidermal growth factor family. EGFR is a cell surface protein that binds to epidermal growth factor. Binding of the protein to a ligand induces receptor dimerization and tyrosine autophosphorylation and leads to cell proliferation. Mutations in this gene are associated with lung cancer. [provided by RefSeq]

Other Designations: avian erythroblastic leukemia viral (v-erb-b) oncogene homolog, cell growth inhibiting protein 40, cell proliferation-inducing protein 61, epidermal growth factor receptor

Gene Information

Entrez GeneID: [1950](#)

Gene Name: EGF

Gene Alias: HOMG4,URG

Gene Description: epidermal growth factor (beta-urogastrone)

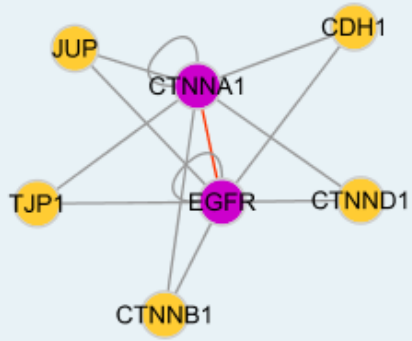

Omim ID: [131530](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: Epidermal growth factor has a profound effect on the differentiation of specific cells in vivo and is a potent mitogenic factor for a variety of cultured cells of both ectodermal and mesodermal origin. The EGF precursor is believed to exist as a membrane-bound molecule which is proteolytically cleaved to generate the 53-amino acid peptide hormone that stimulates cells to divide. [provided by RefSeq]

Other urogastrone
Designations:

Interactome
