TP53 & STK4 Protein Protein Interaction Antibody Pair

Catalog # : DI0257

規格:[1Set]

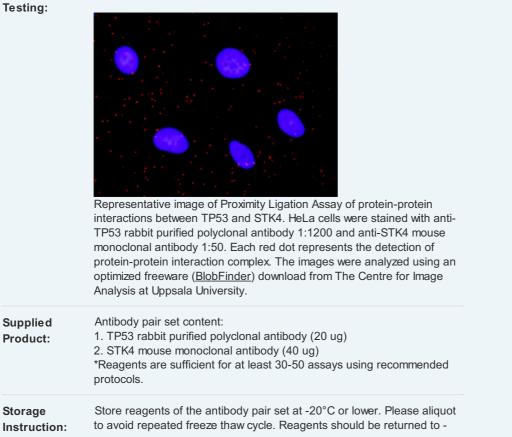

List All

Reactivity: Human

Quality Control Protein protein interaction immunofluorescence result.

Testing:

	20°C storage immediately after use.	
MSDS:	Download	
Publication Reference		
novel prognos Liu CH, Chen Cheng HC, Cl Proteomics. 2	f protein-protein interactions in cross-talk pathways reveals CRKL as a stic marker in hepatocellular carcinoma. TC, Chau GY, Jan YH, Chen CH, Hsu CN, Lin KT, Juang YL, Lu PJ, nen MH, Chang CF, Ting YS, Kao CY, Hsiao M, Huang CY. Mol Cell 013 Feb 8. [Epub ahead of print]	
Applications	Ligation Assay (Cell)	
<u>STK4</u> <u>TP53</u>		
Gene Information		
Entrez GenelD:	7157	
Gene Name:	TP53	
Gene Alias:	FLJ92943,LFS1,TRP53,p53	
Gene Description:	tumor protein p53	
Omim ID:	<u>114480, 114500, 114550, 151623, 161550, 191170, 202300, 260350</u>	
Gene Ontology	: <u>Hyperlink</u>	
Gene Summary	This gene encodes tumor protein p53, which responds to diverse cellular stresses to regulate target genes that induce cell cycle arrest, apoptosis, senescence, DNA repair, or changes in metabolism. p53 protein is expressed at low level in normal cells and at a high level in a variety of transformed cell lines, where it's believed to contribute to transformation and malignancy. p53 is a DNA-binding protein containing transcription activation, DNA-binding, and oligomerization domains. It is postulated to bind to a p53-binding site and activate expression of downstream genes that inhibit growth and/or invasion, and thus function as a tumor suppressor. Mutants of p53 that frequently occur in a number of different human cancers fail to bind the consensus DNA binding site, and hence cause the loss of tumor suppressor activity. Alterations of this gene occur not only as somatic mutations in human malignancies, but also as germline mutations in some cancer-prone families with Li-Fraumeni syndrome. Multiple p53 variants due to alternative promoters and multiple alternative splicing have been found. These variants encode distinct isoforms, which can regulate p53 transcriptional activity. [provided by RefSeq	
Other Designations:	p53 antigen,p53 transformation suppressor,p53 tumor suppressor,phosphoprotein p53,transformation-related protein 53	
Gene Information		
Entrez GenelD:	<u>6789</u>	
Gene Name:	STK4	
Gene Alias:	DKFZp686A2068,KRS2,MST1,YSK3	
Gene Description:	serine/threonine kinase 4	

Page 2 of 3

Omim ID:	<u>604965</u>	
Gene Ontology	: <u>Hyperlink</u>	
Gene Summary	The protein encoded by this gene is a cytoplasmic kinase that is structurally similar to the yeast Ste20p kinase, which acts upstream of the stress-induced mitogen-activated protein kinase cascade. The encoded protein can phosphorylate myelin basic protein and undergoes autophosphorylation. A caspase-cleaved fragment of the encoded protein has been shown to be capable of phosphorylating histone H2B. The particular phosphorylation catalyzed by this protein has been correlated with apoptosis, and it's possible that this protein induces the chromatin condensation observed in this process. [provided by RefSeq	
Other Designations:	OTTHUMP00000043418,dJ211D12.2 (serine/threonine kinase 4 (MST1, KRS2)),kinase responsive to stress 2,mammalian sterile 20-like 1,yeast Ste20-like
