ATF4 & FOS Protein Protein Interaction Antibody Pair

Catalog # : DI0361

規格 : [1 Set]

List All

Specification

Product Description: This protein protein interaction antibody pair set comes with two antibodies to detect the protein-protein interaction, one against the ATF4 protein, and the other against the FOS protein for use in *in situ* Proximity Ligation Assay. See Publication Reference below.

Application Image

In situ Proximity Ligation Assay (Cell)

Reactivity: Human

Quality Control Testing: Protein protein interaction immunofluorescence result.

Representative image of Proximity Ligation Assay of protein-protein interactions between ATF4 and FOS. HeLa cells were stained with anti-ATF4 rabbit purified polyclonal antibody 1:1200 and anti-FOS mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware ([BlobFinder](#)) download from The Centre for Image Analysis at Uppsala University.

Supplied Product: Antibody pair set content:
 1. ATF4 rabbit purified polyclonal antibody (20 ug)
 2. FOS mouse monoclonal antibody (40 ug)
 *Reagents are sufficient for at least 30-50 assays using recommended protocols.

Storage Instruction: Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -

20°C storage immediately after use.

Applications

In situ Proximity Ligation Assay (Cell)

[ATF4](#) [FOS](#)

Gene Information

Entrez GeneID: [468](#)

Gene Name: ATF4

Gene Alias: CREB-2, CREB2, TAXREB67, TXREB

Gene Description: activating transcription factor 4 (tax-responsive enhancer element B67)

Omim ID: [604064](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes a transcription factor that was originally identified as a widely expressed mammalian DNA binding protein that could bind a tax-responsive enhancer element in the LTR of HTLV-1. The encoded protein was also isolated and characterized as the cAMP-response element binding protein 2 (CREB-2). The protein encoded by this gene belongs to a family of DNA-binding proteins that includes the AP-1 family of transcription factors, cAMP-response element binding proteins (CREBs) and CREB-like proteins. These transcription factors share a leucine zipper region that is involved in protein-protein interactions, located C-terminal to a stretch of basic amino acids that functions as a DNA binding domain. Two alternative transcripts encoding the same protein have been described. Two pseudogenes are located on the X chromosome at q28 in a region containing a large inverted duplication. [provided by RefSeq]

Other Designations: activating transcription factor 4, cAMP response element-binding protein 2

Gene Information

Entrez GeneID: [2353](#)

Gene Name: FOS

Gene Alias: AP-1, C-FOS

Gene Description: v-fos FBJ murine osteosarcoma viral oncogene homolog

Omim ID: [164810](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The Fos gene family consists of 4 members: FOS, FOSB, FOSL1, and FOSL2. These genes encode leucine zipper proteins that can dimerize with proteins of the JUN family, thereby forming the transcription factor complex AP-1. As such, the FOS proteins have been implicated as regulators of cell proliferation, differentiation, and transformation. In some cases, expression of the FOS gene has also been associated with apoptotic cell death. [provided by RefSeq]

Other Designations: FBJ murine osteosarcoma viral (v-fos) oncogene homolog (oncogene FOS), activator protein 1, cellular oncogene c-fos
