Gene Information					
Entrez GenelD:	Entrez GenelD: <u>5156</u>				
Gene Name:	PDGFRA				
Gene Alias:	CD140A,MGC74795,PDGFR2,Rhe-PDGFRA				
Gene Description:	platelet-derived growth factor receptor, alpha polypeptide				
Omim ID:	<u>173490, 606764, 607685</u>				
Gene Ontology	: <u>Hyperlink</u>				
Gene Summary	This gene encodes a cell surface tyrosine kinase receptor for members of the platelet-derived growth factor family. These growth factors are mitogens for cells of mesenchymal origin. The identity of the growth factor bound to a receptor monomer determines whether the functional receptor is a homodimer or a heterodimer, composed of both platelet- derived growth factor receptor alpha and beta polypeptides. Studies in knockout mice, where homozygosity is lethal, indicate that the alpha form of the platelet-derived growth factor receptor is particularly important for kidney development since mice heterozygous for the receptor exhibit defective kidney phenotypes. Entrez GenelD:	5335				
Gene Name:	PLCG1				
Gene Alias:	PLC-II,PLC1,PLC148,PLCgamma1				
Gene Description:	phospholipase C, gamma 1				
Omim ID:	172420				
Gene Ontology	: <u>Hyperlink</u>				
Gene Summary	The protein encoded by this gene catalyzes the formation of inositol 1,4,5-trisphosphate and diacylglycerol from phosphatidylinositol 4,5-bisphosphate. This reaction uses calcium as a cofactor and plays an				

	important role in the intracellular transduction of receptor-mediated tyrosine kinase activators. For example, when activated by SRC, the encoded protein causes the Ras guanine nucleotide exchange factor RasGRP1 to translocate to the Golgi, where it activates Ras. Also, this protein has been shown to be a major substrate for heparin-binding growth factor 1 (acidic fibroblast growth factor)-activated tyrosine kinase. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq
