CRK & FLNA Protein Protein Interaction Antibody Pair

Catalog # : DI0507

規格 : [1 Set]

List All

Specification

Product Description: This protein protein interaction antibody pair set comes with two antibodies to detect the protein-protein interaction, one against the CRK protein, and the other against the FLNA protein for use in *in situ* Proximity Ligation Assay. See Publication Reference below.

Application Image

In situ Proximity Ligation Assay (Cell)

Reactivity: Human

Quality Control Testing: Protein protein interaction immunofluorescence result.

Representative image of Proximity Ligation Assay of protein-protein interactions between CRK and FLNA. HeLa cells were stained with anti-CRK rabbit purified polyclonal antibody 1:1200 and anti-FLNA mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware ([BlobFinder](#)) download from The Centre for Image Analysis at Uppsala University.

Supplied Product: Antibody pair set content:
 1. CRK rabbit purified polyclonal antibody (20 ug)
 2. FLNA mouse monoclonal antibody (40 ug)
 *Reagents are sufficient for at least 30-50 assays using recommended protocols.

Storage Instruction: Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -

20°C storage immediately after use.

Gene Information

Entrez GeneID: [1398](#)

Gene Name: CRK

Gene Alias: CRKII

Gene Description: v-crk sarcoma virus CT10 oncogene homolog (avian)

Omim ID: [164762](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes a member of an adapter protein family that binds to several tyrosine-phosphorylated proteins. The product of this gene has several SH2 and SH3 domains (src-homology domains) and is involved in several signaling pathways, recruiting cytoplasmic proteins in the vicinity of tyrosine kinase through SH2-phosphotyrosine interaction. The N-terminal SH2 domain of this protein functions as a positive regulator of transformation whereas the C-terminal SH3 domain functions as a negative regulator of transformation. Two alternative transcripts encoding different isoforms with distinct biological activity have been described. [provided by RefSeq]

Other Designations: avian sarcoma virus CT10 (v-crk) oncogene homolog,v-crk avian sarcoma virus CT10 oncogene homolog,v-crk sarcoma virus CT10 oncogene homolog

Gene Information

Entrez GeneID: [2316](#)

Gene Name: FLNA

Gene Alias: ABP-280,ABPX,DKFZp434P031,FLN,FLN1,FMD,MNS,NHBP,OPD,OPD1,OPD2

Gene Description: filamin A, alpha (actin binding protein 280)

Omim ID: [300017](#), [300049](#), [300537](#), [304120](#), [309350](#), [311300](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is an actin-binding protein that

crosslinks actin filaments and links actin filaments to membrane glycoproteins. The encoded protein is involved in remodeling the cytoskeleton to effect changes in cell shape and migration. This protein interacts with integrins, transmembrane receptor complexes, and second messengers. Defects in this gene are a cause of several syndromes, including periventricular nodular heterotopias (PVNH1, PVNH4), otopalatodigital syndromes (OPD1, OPD2), frontometaphyseal dysplasia (FMD), Melnick-Needles syndrome (MNS), and X-linked congenital idiopathic intestinal pseudoobstruction (CIIPX). Two transcript variants encoding different isoforms have been found for this gene

Other Designations: OTTHUMP00000024320,actin-binding protein 280,filamin 1,filamin A, alpha
