## MAP2K6 & RELA Protein Protein Interaction Antibody Pair

Catalog #: DI0514 規格:[1 Set]

### List All

### **Specification**

# Product Description:

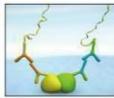

This protein protein interaction antibody pair set comes with two antibodies to detect the protein-protein interaction, one against the MAP2K6 protein, and the other against the RELA protein for use in *in situ* Proximity Ligation Assay. See Publication Reference below.

## Application Image

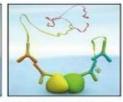

In situ Proximity Ligation Assay (Cell)

 Incubate with target primary antibodies

2. Add PLA probes PLUS and MINUS

 Hybridize connector oligos

 Ligation to form a complete DNA circle

Rolling circle amplification

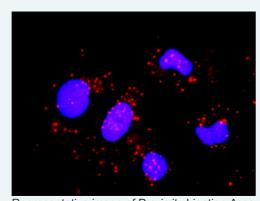

Add fluorescent probes
to reveal interaction

Reactivity:

Human

## Quality Contro

**Quality Control** Protein protein interaction immunofluorescence result.

Representative image of Proximity Ligation Assay of protein-protein interactions between MAP2K6 and RELA. HeLa cells were stained with anti-MAP2K6 rabbit purified polyclonal antibody 1:1200 and anti-RELA mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex. The images were analyzed using an optimized freeware (BlobFinder) download from The Centre for Image Analysis at Uppsala University.

# Supplied Product:

Antibody pair set content:

- 1. MAP2K6 rabbit purified polyclonal antibody (20 ug)
- 2. RELA mouse monoclonal antibody (40 ug)

\*Reagents are sufficient for at least 30-50 assays using recommended protocols.

### Storage Instruction:

Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -

#### **Publication Reference**

 An analysis of protein-protein interactions in cross-talk pathways reveals CRKL as a novel prognostic marker in hepatocellular carcinoma.
Liu CH, Chen TC, Chau GY, Jan YH, Chen CH, Hsu CN, Lin KT, Juang YL, Lu PJ, Cheng HC, Chen MH, Chang CF, Ting YS, Kao CY, Hsiao M, Huang CY. Mol Cell Proteomics. 2013 Feb 8. [Epub ahead of print]

#### **Applications**

In situ Proximity Ligation Assay (Cell)

MAP2K6 RELA

#### **Gene Information**

Entrez GeneID: 5608

Gene Name: MAP2K6

Gene Alias: MAPKK6, MEK6, MKK6, PRKMK6, SAPKK3

Gene mitogen-activated protein kinase kinase 6

**Description:** 

Omim ID: <u>601254</u>

Gene Ontology: Hyperlink

Gene Summary: This gene encodes a member of the dual specificity protein kinase

family, which functions as a mitogen-activated protein (MAP) kinase kinase. MAP kinases, also known as extracellular signal-regulated kinases (ERKs), act as an integration point for multiple biochemical signals. This protein phosphorylates and activates p38 MAP kinase in response to inflammatory cytokines or environmental stress. As an essential component of p38 MAP kinase mediated signal transduction pathway, this gene is involved in many cellular processes such as stress induced cell cycle arrest, transcription activation and apoptosis.

[provided by RefSeq

Other protein kinase, mitogen-activated, kinase 6 (MAP kinase kinase 6)

**Designations:** 

### **Gene Information**

Entrez GeneID: 5970

Gene Name: RELA

Gene Alias: MGC131774,NFKB3,p65

Gene v-rel reticuloendotheliosis viral oncogene homolog A (avian)

Description:

Omim ID: <u>164014</u>

Gene Ontology: Hyperlink

Gene Summary: NFKB1 (MIM 164011) or NFKB2 (MIM 164012) is bound to REL (MIM

164910), RELA, or RELB (MIM 604758) to form the NFKB complex. The p50 (NFKB1)/p65 (RELA) heterodimer is the most abundant form of NFKB. The NFKB complex is inhibited by I-kappa-B proteins (NFKBIA,

MIM 164008 or NFKBIB, MIM 604495), which inactivate NFKB by trapping it in the cytoplasm. Phosphorylation of serine residues on the l-kappa-B proteins by kinases (IKBKA, MIM 600664, or IKBKB, MIM 603258) marks them for destruction via the ubiquitination pathway, thereby allowing activation of the NFKB complex. Activated NFKB complex translocates into the nucleus and binds DNA at kappa-B-binding motifs such as 5-prime GGGRNNYYCC 3-prime or 5-prime HGGARNYYCC 3-prime (where H is A, C, or T; R is an A or G purine; and Y is a C or T pyrimidine).[supplied by OMIM

Other Designations:

nuclear factor of kappa light polypeptide gene enhancer in B-cells 3,v-rel avian reticuloendotheliosis viral oncogene homolog A (nuclear factor of kappa light polypeptide gene enhancer in B-cells 3 (p65)),v-rel reticuloendotheliosis viral oncogene homolog
