### CDKN1A(phospho T57) & CDKN1A Protein Phosphorylation Antibody Pair

#### Catalog #: DP0024

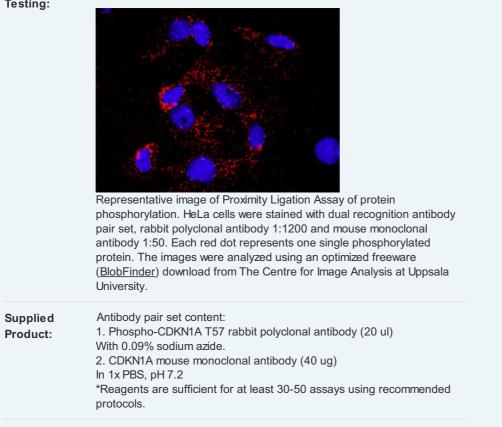

規格:[1Set]

List All

Quality Control Dual recognition immunofluorescence result.

Testing:

Storage	Store reagents of the antibody pair set at -20°C or lower. Please aliquot
Instruction:	to avoid repeated freeze thaw cycle. Reagents should be returned to -
	20°C storage immediately after use.

#### **Applications**

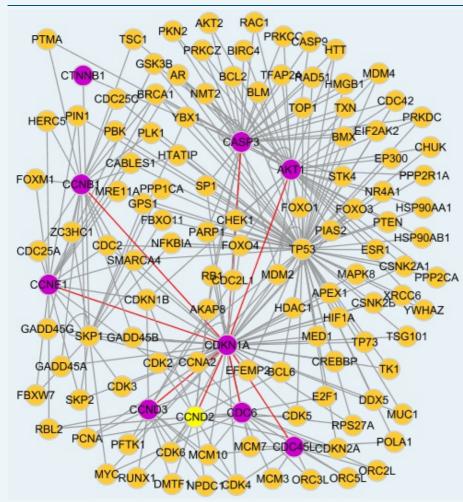

In situ Proximity Ligation Assay (Cell)

Gene Information	
Entrez GeneID:	1026
Gene Name:	CDKN1A
Gene Alias:	CAP20,CDKN1,CIP1,MDA-6,P21,SDI1,WAF1,p21CIP1
Gene Description:	cyclin-dependent kinase inhibitor 1A (p21, Cip1)
Omim ID:	<u>116899</u>
Gene Ontology:	<u>Hyperlink</u>
Gene Summary:	This gene encodes a potent cyclin-dependent kinase inhibitor. The encoded protein binds to and inhibits the activity of cyclin-CDK2 or CDK4 complexes, and thus functions as a regulator of cell cycle

CDK4 complexes, and thus functions as a regulator of cell cycle progression at G1. The expression of this gene is tightly controlled by the tumor suppressor protein p53, through which this protein mediates the p53-dependent cell cycle G1 phase arrest in response to a variety of stress stimuli. This protein can interact with proliferating cell nuclear antigen (PCNA), a DNA polymerase accessory factor, and plays a regulatory role in S phase DNA replication and DNA damage repair. This protein was reported to be specifically cleaved by CASP3-like caspases, which thus leads to a dramatic activation of CDK2, and may be instrumental in the execution of apoptosis following caspase activation. Two alternatively spliced variants, which encode an identical protein, have been reported. [provided by RefSeq

Other	CDK-Interaction protein 1, DNA synthesis
Designations:	inhibitor,OTTHUMP00000016298,cyclin-dependent kinase inhibitor
•	1A,melanoma differentiation associated protein 6,wild-type p53-
	activated fragment 1
