### Gene Information

**Entrez GeneID:** [100](#)

**Gene Name:** ADA

**Gene Alias:** -

**Gene Description:** adenosine deaminase

**Omim ID:** [102700](#), [608958](#)

**Gene Ontology:** [Hyperlink](#)

**Gene Summary:** This gene encodes an enzyme that catalyzes the hydrolysis of

adenosine to inosine. Various mutations have been described for this gene and have been linked to human diseases. Deficiency in this enzyme causes a form of severe combined immunodeficiency disease (SCID), in which there is dysfunction of both B and T lymphocytes with impaired cellular immunity and decreased production of immunoglobulins, whereas elevated levels of this enzyme have been associated with congenital hemolytic anemia. [provided by RefSeq]

**Other Designations:** adenosine aminohydrolase
