---

**Gene Summary:** The protein encoded by this gene shares significant sequence identity with the murine TSC-22 and Drosophila shs, both of which are leucine zipper proteins, that function as transcriptional regulators. The expression of this gene is stimulated by glucocorticoids and interleukin 10, and it appears to play a key role in the anti-inflammatory and immunosuppressive effects of this steroid and chemokine. Transcript variants encoding different isoforms have been identified for this gene. [provided by RefSeq]

**Other Designations:** DSIP-immunoreactive leucine zipper protein, OTTHUMP00000023811, OTTHUMP00000023813, OTTHUMP0000023814, TSC-22 related protein, delta sleep inducing peptide, immunoreactor, glucocorticoid-induced leucine zipper protein
