ELISA Pair (Recombinant protein)

**Gene Summary:** Fibrinogen-like 1 is a member of the fibrinogen family. This protein is homologous to the carboxy terminus of the fibrinogen beta- and gamma- subunits which contains the four conserved cysteines of fibrinogens and fibrinogen related proteins. However, this protein lacks the platelet-binding site, cross-linking region and a thrombin-sensitive site which are necessary for fibrin clot formation. This protein may play a role in the development of hepatocellular carcinomas. Four alternatively spliced transcript variants encoding the same protein exist for this gene. [provided by RefSeq]

**Other Designations:** OTTHUMP00000122468,hepassocin,hepatocellular carcinoma-related sequence,hepatocyte-derived fibrinogen-related protein 1
