**Gene Ontology:** [Hyperlink](#)

**Gene Summary:** The protein encoded by this gene is a member of the CXC chemokine family. This chemokine is one of the major mediators of the inflammatory response. This chemokine is secreted by several cell types. It functions as a chemoattractant, and is also a potent angiogenic factor. This gene is believed to play a role in the pathogenesis of bronchiolitis, a common respiratory tract disease caused by viral infection. This gene and other ten members of the CXC chemokine gene family form a chemokine gene cluster in a region mapped to chromosome 4q. [provided by RefSeq]

**Other Designations:** T cell chemotactic factor, beta-thromboglobulin-like protein, chemokine (C-X-C motif) ligand 8, eotaxin, granulocyte chemotactic protein 1, lymphocyte-derived neutrophil-activating factor, monocyte-derived neutrophil chemotactic factor, neutrophil-activating p
