**Gene Summary:** This gene is a member of a family of neurotrophic factors, neurotrophins, that control survival and differentiation of mammalian neurons. The expression of this gene is ubiquitous and less influenced by environmental signals. While knock-outs of other neurotrophins including nerve growth factor, brain-derived neurotrophic factor, and neurotrophin 3 prove lethal during early postnatal development, NTF5-deficient mice only show minor cellular deficits and develop normally to adulthood. **Other Designations:** neurotrophic factor 4,neurotrophic factor 5,neurotrophin 5,neurotrophin 5 (neurotrophin 4/5)
