ELISA Pair (Recombinant protein)

Gene Summary: This gene encodes a protein which is capable of interacting with the major nonstructural protein of parvovirus H-1 and 70-kDa heat shock cognate protein; however, its function is not known. Since this transcript is expressed ubiquitously in various tissues, this protein may serve a housekeeping function. [provided by RefSeq]

Other Designations: protein containing three tetratricopeptide repeats,small glutamine-rich tetratricopeptide
