**Gene Summary:** The protein encoded by this gene is a member of the pexin family. It is found in serum and tissues and promotes cell adhesion and spreading, inhibits the membrane-damaging effect of the terminal cytolytic complement pathway, and binds to several serpin serine protease inhibitors. It is a secreted protein and exists in either a single chain form or a clipped, two chain form held together by a disulfide bond. [provided by RefSeq]

**Other Designations:** complement S-protein,epibolin,serum spreading factor,somatomedin B,vitronectin (serum spreading factor, somatomedin B, complement S-protein)
