Immunoprecipitation-Western Blot

Gene Summary: This gene transcribes naturally-occurring mRNAs that are co-transcribed products of the neighboring JMJD7 and PLA2G4B genes. Incompletely processed read-through transcripts from these two loci are abundantly expressed in most tissues, but the function of the predicted protein product has not yet been determined. Alternative splicing of this gene results in different transcript variants, some of which are candidates for nonsense-mediated decay (NMD). [provided by RefSeq]

Other Designations: JMJD7-PLA2G4B protein, JMJD7-PLA2G4B read-through, OTTHUMP0000041703, phospholipase A2, group IVB (cytosolic)
