### Gene Information

**Entrez GeneID:** [8771](#)

**Gene Name:** TNFRSF6B

**Gene Alias:** DCR3,DJ583P15.1.1,M68,TR6

**Gene Description:** tumor necrosis factor receptor superfamily, member 6b, decoy

**Omim ID:** [603361](#)

**Gene Ontology:** [Hyperlink](#)

**Gene Summary:** This gene belongs to the tumor necrosis factor receptor superfamily. The encoded protein is postulated to play a regulatory role in suppressing FasL- and LIGHT-mediated cell death. It acts as a decoy receptor that competes with death receptors for ligand binding. Overexpression of this gene has been noted in gastrointestinal tract tumors, and it is located in a gene-rich cluster on chromosome 20, with other potentially tumor-related genes. Two transcript variants encoding the same isoform, but differing in the 5' UTR, have been observed for this gene. [provided by RefSeq]
