Gene Summary: This gene encodes an ubiquitin-like
protein (ubiquilin) that shares high degree of similarity
with related products in yeast, rat and frog. Ubiquilins
contain a N-terminal ubiquitin-like domain and a C-

terminal ubiquitin-associated domain. They physically
associate with both proteasomes and ubiquitin ligases,
and thus thought to functionally link the ubiquitination
machinery to the proteasome to affect in vivo protein
degradation. This ubiquilin has also been shown to bind
the ATPase domain of the Hsp70-like Stch protein.
