Cell Plasma Membrane Staining Kit (Green Fluorescence)

Catalog Number: KA6034

Regulation Status: For research use only (RUO)

Product Description: Cell Plasma Membrane Staining Kit (Green Fluorescence) provides a fast and uniform labeling of the plasma membrane without the cell-type differences exhibited by lectins. It may be used as a segmentation tool for HCS (high-content screening), as well as to stain cellular plasma membranes for standard fluorescence microscopy. The green fluorescent stain used in the kit survives fixation, but not permeabilization, so it is not suitable for experiments that also involve probing internal targets via antibodies.

Applications: Func

(See our web site product page for detailed applications information)

Protocols: See our web site at

<http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

Storage Instruction: Store the kit at -20°C and avoid from light.
