Datasheet

VHH-His tag NanoAb[™] Targeting Human CD63, clone 3033 (FITC)

Catalog Number: NAB00053-MF01J

Regulation Status: For research use only (RUO)

Product Description: VHH-His tag NanoAb[™] targeting human CD63 native protein.

Clone Name: 3033

Immunogen: Human CD63 recombinant protein

Sequence: Available for licensing

Antibody Species: Camelid

Epitope: Monospecific

Tag: 6x-His Tag at C-terminus

Affinity: Not measured

Form: Liquid

Conjugation: FITC

Protocols: See our web site at http://www.abnova.com/support/protocols.asp or product page for detailed protocols

Conjugation: FITC

Preparation Method: Mammalian cell (HEK293) expression system

Purification: Ni-IDA (Iminodiacetic acid) resin

Recommend Usage: Flow cytometry ELISA The optimal working dilution should be determined by the end user.

Storage Buffer: In PBS, pH 7.4

Storage Instruction: Store at -80°C. Aliquot to avoid repeated freezing and thawing.

Entrez GenelD: 967

Gene Symbol: CD63

Gene Alias: LAMP-3, ME491, MLA1, OMA81H, TSPAN30

Gene Summary: The protein encoded by this gene is a member of the transmembrane 4 superfamily, also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. This encoded protein is a cell surface glycoprotein that is known to complex with integrins. It may function as a blood platelet activation marker. Deficiency of this protein is associated with Hermansky-Pudlak syndrome. Also this gene has been associated with tumor progression. The use of alternate polyadenylation sites has been found for this gene. Alternative splicing results in multiple transcript variants encoding different proteins. [provided by RefSeq]
