**Gene Symbol:** MSTN

**Gene Alias:** GDF8

**Gene Summary:** The protein encoded by this gene is a  
member of the bone morphogenetic protein (BMP) family  
and the TGF-beta superfamily. This group of proteins is  
characterized by a polybasic proteolytic processing site  
which is cleaved to produce a mature protein containing

seven conserved cysteine residues. The members of  
this family are regulators of cell growth and  
differentiation in both embryonic and adult tissues. This  
gene is thought to encode a secreted protein which  
negatively regulates skeletal muscle growth. [provided
