BC08118b : Breast cancer with breast tissue array, including pathology grade, TNM and clinical stage, 100 cases/100 cores, replacing BC08118a

Microarray Panel	Breast carcinoma with breast tissue microarray, containing 80 cases invasive carcinoma, no special type, 5 invasive lobular carcinoma, 1 mucinous carcinoma, 4 medullary carcinoma, plus 1 breast tissue and 9 adjacent normal breast tissue, single core per case		
Cores	100	BC08118b H&E 	
Cases	100		
Row number	10		
Column number	10		
Core Diameter (mm)	1		
Thickness (µm)	5		
Tissue Array Type	FFPE		
Species	Human		
Applications	54		
Notes	1. TMA slides were sectioned and stored at 4°C and may not be fresh cut, but still suitable for IHC. Please request fresh cut if experiment involves phospho-specific antibodies, RNA studies, FISH or ISH, etc. A minimum of 3 slides per TMA must be purchased to cover the cost of trimming for fresh sectioning. 2. Most TMA slides were not coated with an extra layer of paraffin (tissue cores can be easily seen on the glass). To prevent tissue detachment during antigen retrieval, unbaked slides must be baked for at least 30 to 120 minutes at 60°C. before putting into xylene for de-paraffinization. Baked slides were sent out baked for 2 hours. In the following specsheet, "" means invalid core; "-" means no applicable or negative in IHC markers.
