Chicken Tissue Genomic DNA Panel, set of any 5 Tissues

Code: GC-005

Pack size : 5X0.025mg

Chicken tissue Genomic DNA panel set of 5 tissues is your choice of DNA of any 5 chicken tissues (0.025mg each). The highly pure intact high molecular size DNA is extracted from single tissue and treated with DNase-free RNase to remove contaminant RNA. Genomic DNA is precisely measured by Nanodrop (a spectrophotometer technology) and stored at -80oC

Applications:

PCR Amplification, Southern blot analysis, genomic DNA methylation, single-nucleotide polymorphism (SNP) Analysis, profiling studies in gene expression, and DNA library construction

Quality Control:

The integrity and purity of genomic DNA was tested by agarose gel electrophoresis and spectrophotometer, ratio of A260/280 is >1.8, successful PCR amplification of Beta-Actin, and successful digestion of DNA by EcoR1 and/or Hind III enzyme.

Packing/shipping:

Genomic DNA is routinely provided in TE buffer at a concentration of 0.5mg/ml or 1mg/ml and shipped on blue for overnight delivery.
