Human Skin Total Protein

Catalog #: HT-101

Quantity: 0.5mg

Storage Conditions: Store at -80oC. Lysates are suitable for use for one year from the date of purchase if stored correctly.

Applications: Total protein is ready for immediate use in Western blotting, immunoprecipitation, SDS-PAGE, isoelectric focusing gels and SDS-capillary electrophoresis, enzymatic activity analysis, gel shifting assay, protein-protein interaction, and tissue-specific expression.

Quality Control: The quality of protein as indicated by the absence of smear (no degradation) and sharpness and resolution of protein bands is verified by denatured SDS-PAGE with Coomassie blue staining. The integrity of the protein is tested by immunoblotting using a specific beta-actin antibody.

Product Description: Human Skin total protein (protein lysate) is isolated from freshly harvested tissues of a single healthy normal donor. Tissues are homogenized in protein lysis buffer supplemented with a cocktail of 6 mammalian protease inhibitors to minimize proteolysis, precisely quantified, and stored at -80oC.

Note: If precipitation is observed, heat samples at 37oC - 40oC for 5-10 min.

Packing/shipping: The extracted protein is provided in vials at a concentration of 5mg/ml and shipped on dry ice. Protein can also be provided in denatured SDS Sample buffer for only Western blotting use
