Mouse C57 Intestine, Duodenum Swiss Roll Frozen Sections

Mouse Intestine, Duodenum Swiss Roll frozen sections are made of freshly harvested C57 mouse tissues. Duodenum tissue was removed, longitudinally opened, rolled with mucosa outward, snapped frozen in OCT, sectioned at a thickness of 7-10 microns and sections mounted on positively charged slides (2 sections per slide).

Code: MF-307-SR-C57

Quality Control: Frozen tissue sections are H&E stained and examined by histologists with 28 years of experience to be sure of excellent morphology and high quality.

Applications: Frozen tissue sections are prepared in RNase-, DNase-, and protease-free environment and are ideal for immunohistochemistry and in situ hybridization.

Packing/shipping: Frozen sections are shipped in tightly closed slide boxes or slide mailers on dry ice and are good for one year if properly stored.
