Mouse C57 Brain Region 9 Paraffin Sections

Catalog #: MP-201-09-C57

Quantity : 10 slides

Storage Conditions: Store slides at room temperature in a dry place or at +4C in a sealed bag containing desiccant. Sections are good for 1 year of the date of purchase, if stored properly.

Applications: Mouse paraffin tissue sections ideal for:

- Cellular localization of the protein of interest in mouse embryonic tissues by immunohistochemistry
- Cellular localization of the mRNA of interest in mouse embryonic tissues by *in situ* hybridization or *in situ* PCR using both radioactive- and non-radioactive labelled probes.

Product Description

Mouse tissues are freshly harvested from C57 mice, fixed in 10% neutral buffered formalin and processed for embedding in low temperature melting paraffin. Tissue blocks cut to a thickness of 5microns and mounted on positively charged slides. Each slide contains 2-3 sections depending on the size of sections. All tissue preparation steps from harvesting to embedding in paraffin are done in RNase-, DNase-, and protease-free conditions.

Shipping: Slides are shipped at room temperature in a slide mailer or slide box.

Prior to use: Remove paraffin by dipping slides in xylene or any substitutive agent (3 changes, 5 minutes each), rehydrate in serial ethanol dilutions, and finally wash with PBS. For *in situ* hybridization applications, make alcohol solutions and PBS in RNase-free water.
