Mouse C57BL/6 Brain Region Total RNA Panel, Set of any 15 Regions

Catalog Number: MR-201-015-C57

Unit: 15 x 25 µg

Description: 15 x 25µg of mouse total RNA isolated from specific tissue type selected from the list included below. Total RNA is routinely extracted from tissues/cells using the powerful guanidine isothiocyanate–phenol:chloroform extraction method which allows the rapid isolation of total RNA including microRNA. RNA is treated with RNase-free DNase to remove residual DNA, precisely quantified, and stored at - 80°C. The integrity of each RNA sample as indicated by intact ribosomal RNA is verified by denatured agarose gel electrophoresis. The purity of RNA is assessed by spectrophotometer (A260/A280: 1.9-2.1).

RNA is ideal for Northern blotting, ribonuclease protection assay, S1 nuclease assay, RT-PCR/Q-PCR analysis, rapid amplification of cDNA ends (RACE) and purification of mRNA for library construction. Total RNA is provided in RNase-free water, 1mM sodium citrate, or 0.1 mM EDTA at a concentration of 1 mg/ml and shipped on dry ice.
