Sweet Potato Genomic DNA

Cat. PLG-1099

Sweet Potato genomic DNA is a highly pure intact high molecular size DNA. It is extracted from plant leaves and treated with DNase-free RNase to remove contaminant RNA. Genomic DNA is precisely measured by Nanodrop (a spectrophotometer technology) and stored at -80°C

Applications:

PCR Amplification, Southern blot analysis, genomic DNA methylation, single-nucleotide polymorphism (SNP) Analysis, profiling studies in gene expression, and DNA library construction

Quality Control:

The integrity and purity of genomic DNA was tested by agarose gel electrophoresis and spectrophotometer, ratio of A260/280 is >1.8, successful PCR amplification of Beta-Actin, and successful digestion of DNA by EcoR1 and/or Hind III enzyme.

Pack Size:

Genomic DNA is routinely provided in TE buffer at a concentration of 0.5mg/ml or 1mg/ml.
