Gene Full Name	Ornithine decarboxylase antizyme 3
Alias Symbols	AZ3, OAZ-t, TISP15
Peptide Sequence	Synthetic peptide located within the following region: DRRLFLDIPYQALDQGNRESLTATLEYVEEKTNVDSVFVNFQNDNRDRGA
Product Format	Liquid. Purified antibody supplied in 1x PBS buffer.
Description of Target	Ornithine decarboxylase catalyzes the conversion of ornithine to putrescine in the first and apparently rate-limiting step in polyamine biosynthesis. The ornithine decarboxylase antizymes play a role in the regulation of polyamine synthesis by binding to and inhibiting ornithine decarboxylase. Antizyme expression is auto-regulated by polyamine-enhanced translational frameshifting. In contrast to antizymes 1 and 2, which are widely expressed throughout the body, the expression of this gene product (antizyme 3) is restricted to testis germ cells, and thus it is a possible candidate for heritable forms of human male infertility. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
Protein Interactions	AZIN2; C1orf94; L3MBTL3; AZIN1; IKZF3; BLZF1; REL; ODC1; OAZ1; GGN; SMAD1;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
