Description of Target	TEX14 belongs to the protein kinase superfamily. It contains 3 ANK repeats and 1 protein kinase domain. TEX14 is required for spermatogenesis and male fertility. It may be required for normal structure of the intercellular bridge that connects spermatocytes and spermatogonia. It has no protein kinase activity. This gene is similar to a mouse gene that is expressed in the testis.
Protein Interactions	TEX14; CEP55;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
