Description of Target	IL1B is a member of the interleukin 1 cytokine family. This cytokine is produced by activated macrophages as a proprotein, which is proteolytically processed to its active form by caspase 1 (CASP1/ICE). This cytokine is an important mediator of the inflammatory response, and is involved in a variety of cellular activities, including cell proliferation, differentiation, and apoptosis. The induction of cyclooxygenase-2 (PTGS2/COX2) by this cytokine in the central nervous system (CNS) is found to contribute to inflammatory pain hypersensitivity. The gene encoding IL1B and eight other interleukin 1 family genes form a cytokine gene cluster on chromosome 2.
Protein Interactions	PTPN1; LYN; FYN; CMA1; CASP1; APP; SP1; EGR1; ELAVL1; CASP4; IL1RAP; PRTN3; IL1R2; IL1R1; IL1B; MMP2; ADRB2; A2M; UBE2N; ZNF675; MAPK8IP2;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
