Description of Target	The aldehyde dehydrogenases are a family of isozymes that may play a major role in the detoxification of aldehydes generated by alcohol metabolism and lipid peroxidation. ALDH3B1 is highly expressed in kidney and lung. The aldehyde dehydrogenases are a family of isozymes that may play a major role in the detoxification of aldehydes generated by alcohol metabolism and lipid peroxidation. This particular gene spans about 20 kb of genomic DNA and is composed of 9 coding exons. The gene encodes a single transcript of 2.8 kb which is highly expressed in kidney and lung. The functional significance of this gene as well as the cellular localization of its product are presently unknown. Two transcript variants encoding different isoforms have been found for this gene.
Protein Interactions	NOTCH2NL; KRTAP10-3; KRTAP10-8; KRTAP10-5; KRTAP10-9; KRTAP10-7; KRT40; KRTAP4-2; UBC; KRT31; BAG3; NOS2;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
