PRODUCTION PROCEDURES

Recombinant antibody was purified from cell culture supernatant.

Immunogen was a peptide representing a region between residue 1074 and the C-terminus (residue 1124) of human zinc finger E-box-binding homeobox 1 using the numbering given

in entry NP_110378.3 (Gene ID 6935).

APPLICATIONS Centrifuge tube to remove product from lid. Optimal working dilutions should be determined

experimentally by the investigator. Prepare working dilution immediately before use.

APPLICATION NOTES All western blot analysis is performed using 5% Milk-TBST for blocking and as antibody diluent.

Primary antibody is incubated overnight.

Western blots of cell lysates are performed using Goat anti-Rabbit IgG Heavy and Light Chain

Antibody (Cat. No. A120-101P).

Western blots of immunoprecipitates are performed using Goat anti-Rabbit Light Chain HRP Conjugate (Cat. No. A120-113P) with 5% Normal Pig Serum (Cat. No. S100-020) added to the

blocking buffer.

A700–102CF is the carrier–free formulation of A700–102. This product is optimized for conjugation with enzymes, fluorochromes, biotin, radioisotopes, oligonucleotides.

microspheres, and other reagents. The optimal experimental concentration of the antibody

post-conjugation must be determined by the investigator.

This document certifies that this product has met all of the quality control standards defined by Bethyl Laboratories, Inc.
