| CLONE #               | BLR366N                                                                                                                                                                                                                                                                                                        |
| ORIGIN                | USA                                                                                                                                                                                                                                                                                                            |
| PRODUCTION PROCEDURES | Recombinant antibody was purified from cell culture supernatant.<br><br>Immunogen was a peptide representing a region between residue 1 and 50 of human Transcriptional activator Myb using the numbering given in entry NP_001123645.1 (Gene ID 4602).                                                        |
| APPLICATIONS          | Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.<br><br>Immunocytochemistry 1:100 to 1:500. Epitope retrieval with citrate buffer pH 6.0 is recommended for FFPE cell sections. |
| IHC HUMAN CONTROLS    | Jurkat Cells, K-562 Cells, MOLT-4 Cells, THP-1 Cells                                                                                                                                                                                                                                                           |
