Product Information

***Sambucus Nigra* Lectin (SNA, EBL)**

See [product page](#) for a full list of product names and catalog numbers.

Unit Size: 1 mL

Storage and Handling

Store at 4°C, protected from light. Product is stable for at least 12 months from date of receipt when stored as recommended.

Conjugate Composition

These conjugates are provided at a concentration of 1 mg/mL. The storage buffer contains 10 mM HEPES, 0.15 M NaCl, 0.08% sodium azide, 0.1 mM CaCl₂ (pH 7.5).

Product Technical Information

See [product page](#) for spectral properties and other dye-specific technical information. See our [Spectra Viewer](#) to view and download the dye excitation and emission spectra.

Product Description

Sambucus nigra lectin, also known as elderberry bark lectin (EBL) and *Sambucus nigra* agglutinin (SNA), belongs to the group of type 2 ribosome-inactivating proteins. It is composed of an A-chain with enzymatic activity and a B-chain with carbohydrate-binding activity, and has a combined molecular weight of ~140,000 Da. SNA binds preferentially to sialic acid attached to terminal galactose in α -2,6 and to a lesser degree, α -2,3 linkage. SNA can induce apoptosis in insect cells and cultured mammalian cell cancer cells. This effect depends on the carbohydrate binding of the B-chain.

Sambucus nigra lectin is available conjugated to biotin and a selection of bright and photostable CF® Dyes. CF® Dyes are Biotium's line of next-generation fluorescent dyes with advantages in brightness, photostability, and conjugate specificity compared to other fluorescent dyes.

Experimental Protocols

Sambucus nigra lectin conjugate applications are reported in published literature. We recommend consulting the literature to find a protocol that will be suitable for your application. For immunofluorescence of tissue sections, we recommend staining with 5 ug/mL lectin conjugate in PBS for 15 minutes, followed by washing in PBS as a starting point for optimization.
