# PRODUCT INFORMATION

## Quinestrol

Item No. 10006320

CAS Registry No.: 152-43-2  
Formal Name: 3-(cyclopentyloxy)-19-norpregna-  
1,3,5(10)-trien-20-yn-17 $\alpha$ -ol  
Synonyms: Ethynyl Estradiol-3-cyclopentyl  
ether, W 3566  
MF: C<sub>25</sub>H<sub>32</sub>O<sub>2</sub>  
FW: 3645  
Purity:  $\geq 98\%$   
UV/Vis.:  $\lambda_{\text{max}}$ : 202, 281 nm  
Supplied as: A crystalline solid  
Storage: -20°C  
Stability:  $\geq 2$  years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

### Laboratory Procedures

Quinestrol is supplied as a crystalline solid. A stock solution may be made by dissolving the quinestrol in an organic solvent purged with an inert gas. Quinestrol is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of quinestrol in ethanol is approximately 20 mg/ml and approximately 30 mg/ml in DMSO and DMF.

Quinestrol is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. Quinestrol has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

### Description

Quinestrol is a synthetic estrogen that is effective in hormone replacement therapy.<sup>1,2</sup> It is a 3-cyclopentyl ether of ethynyl estradiol. After gastrointestinal absorption, it is stored in adipose tissue, where it is slowly released and metabolized in the liver to its active form, ethynyl estradiol. Quinestrol has found limited use in suppressing lactation in postpartum women and, in combination with synthetic progestogens, as contraceptive therapy, although additional studies are needed for both applications.
