# **PRODUCT** INFORMATION

#### NH125

Item No. 10011250

CAS Registry No.: Formal Name:	1-hexadecyl-2-methyl-3-	1	
MF: FW: Purity: UV/Vis.: Supplied as: Storage: Stability:	(phenylmethyl)-1H-imidazolium-iodide $C_{27}H_{45}IN_2$ 524.6 ≥95% $\lambda_{max}$ : 214 nm A crystalline solid -20°C ≥2 years		
Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.			

#### Laboratory Procedures

NH125 is supplied as a crystalline solid. A stock solution may be made by dissolving the NH125 in the solvent of choice, which should be purged with an inert gas. NH125 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of NH125 in these solvents is approximately 5, 2.5, and 15 mg/ml, respectively.

NH125 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, NH125 should first be dissolved in DMF and then diluted with the aqueous buffer of choice. NH125 has a solubility of approximately 0.3 mg/ml in a 1:2 solution of DMF:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

#### Description

NH125 is an imidazole that has potent antibacterial properties in drug-resistant bacteria.<sup>1</sup> In bacteria, NH125 inhibits several histidine kinases, inhibiting YycG with an IC<sub>50</sub> of 6.6  $\mu$ M.<sup>2</sup> NH125 also decreases the viability of several cancer cell lines with IC<sub>50</sub> values ranging from 0.7-4.7  $\mu$ M.<sup>3</sup> In mammalian cells, NH125 strongly inhibits eEF-2K (IC<sub>50</sub> = 60 nM), with weaker effects on protein kinase C (IC<sub>50</sub> = 7.5  $\mu$ M), protein kinase A (IC<sub>50</sub> = 80  $\mu$ M), and calmodulin-dependent kinase II (IC<sub>50</sub> = 100  $\mu$ M).<sup>3</sup>
