PRODUCT INFORMATION

PAD2 (human, recombinant)

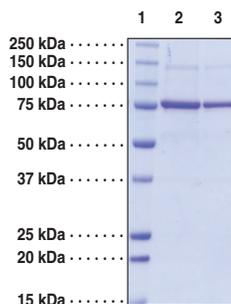

Item No. 10785

Overview and Properties

Synonyms:	PADI2, PAD-H19, Peptidylarginine Deiminase 2, Protein Arginine Deiminase 2
Source:	Active recombinant N-terminal hexahistidine-tagged enzyme isolated from a baculovirus overexpression system
Amino Acids:	1-665 (full length)
Uniprot No.:	Q9Y2J8
Molecular Weight:	77.32 kDa
Storage:	-80°C (as supplied); avoid freeze/thaw cycles by aliquoting protein
Stability:	≥1 year
Purity:	≥90% estimated by SDS-PAGE
Supplied in:	50 mM HEPES, pH 8.0, with 200 mM NaCl, 1 mM DTT and 10% glycerol
Protein Concentration:	<i>batch specific</i> mg/ml
Activity:	<i>batch specific</i> U/ml
Specific Activity:	<i>batch specific</i> ; ≥500 U/mg
Unit Definition:	One unit is defined as the amount of enzyme required to produce 1 nmol of NH ₄ ⁺ per minute at 37°C in 50 mM HEPES, pH 7.7, containing 10 mM calcium chloride, 5 mM DTT, and 5 mM N-α-Benzoyl-L-Arginine ethyl ester (BAEE).

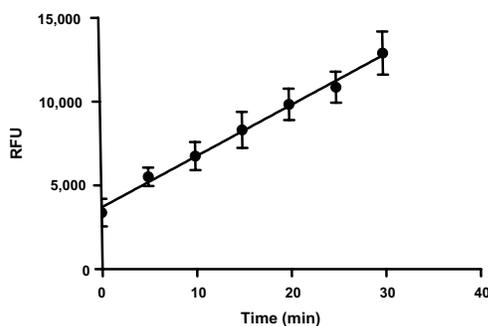

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

PAD2 Activity with 5 mM BAEE

[Cl-Amidine] log (M)

WARNING
THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

SAFETY DATA
This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the [complete](#) Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY
Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.

PRODUCT INFORMATION

Description

Protein Arginine Deiminases (PADs) are guanidino-modifying enzymes belonging to the amidinotransferase superfamily and are designated PAD1-4 and PAD6. PAD enzymes catalyze the conversion of specific arginine residues to citrulline in a calcium-dependent manner. All enzymes are cytosolic except for PAD4 which is localized in the nucleus.¹ PAD2 is the most widely expressed member and also the most conserved across mammalian species, implying it is the ancestral homologue of the PADs.² Overexpression of PAD2 results in myelin loss in a transgenic model, potentially linking PAD2 activity to multiple sclerosis.³ It has also been shown to modify vimentin and β/γ -actin, potentially aggravating the autoantigen response in rheumatoid arthritis.^{4,5} PAD2 may also play a role in transcriptional regulation, as it has been shown capable of citrullinating histones, particularly H3 during mammalian reproductive cycles, when it is transcriptionally activated in the nucleus.⁶
