Laboratory Procedures

For long term storage, we suggest that 4-amino benzthioamide be stored as supplied at -20°C. It should be stable for at least two years.

4-amino Benzthioamide is supplied as a crystalline solid. A stock solution may be made by dissolving the 4-amino benzthioamide in the solvent of choice. 4-amino Benzthioamide is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of 4-amino benzthioamide in ethanol is approximately 0.15 mg/ml and approximately 10 mg/ml in DMSO and DMF.

4-amino Benzthioamide is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, 4-amino benzthioamide should first be dissolved in DMF and then diluted with the aqueous buffer of choice. 4-amino Benzthioamide has a solubility of approximately 0.1 mg/ml in a 1:9 solution of DMF:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

4-amino Benzthioamide is a synthetic intermediate useful for pharmaceutical synthesis.
