Laboratory Procedures

ABT-263 is supplied as a crystalline solid. A stock solution may be made by dissolving the ABT-263 in the solvent of choice, which should be purged with an inert gas. ABT-263 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of ABT-263 in these solvents is approximately 0.5, 25, and 30, respectively.

ABT-263 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, ABT-263 should first be dissolved in DMF and then diluted with the aqueous buffer of choice. ABT-263 has a solubility of approximately 0.3 mg/ml in a 1:2 solution of DMF:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

ABT-263 is an inhibitor of the Bcl-2 family proteins Bcl-2, Bcl-xL, and Bcl-W (K_i s = <1, <0.5, and <1 nM, respectively).¹ It is selective for Bcl-2, Bcl-xL, and Bcl-W over Mcl-1 and A1 (K_i s = 550 and 354 nM, respectively). ABT-263 is cytotoxic in a panel of small cell lung cancer (SCLC), leukemia, and lymphoma cell lines with a mean EC_{50} value of 1 μ M. It induces apoptosis in influenza A-infected retinal pigment epithelial cells (EC_{50} = 0.08 μ M).² ABT-263 (100 mg/kg) induces tumor regression in NCI H146 SCLC and RS4;11 acute lymphocytic leukemia (ALL) mouse xenograft models.^{1,3}
