PRODUCT INFORMATION

Andrographolide

Item No. 11679

CAS Registry No.: 5508-58-7
Formal Name: 3E-[2-[(1R,4aS,5R,6R,8aS)-decahydro-6-hydroxy-5-(hydroxymethyl)-5,8a-dimethyl-2-methylene-1-naphthalenyl]ethylidene]dihydro-4S-hydroxy-2(3H)-furanone

MF: C₂₀H₃₀O₅
FW: 350.5
Purity: ≥98%
UV/Vis.: λ_{max}: 225 nm
Supplied as: A crystalline solid
Storage: -20°C
Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Andrographolide is supplied as a crystalline solid. A stock solution may be made by dissolving the andrographolide in the solvent of choice, which should be purged with an inert gas. Andrographolide is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of andrographolide in these solvents is approximately 0.2, 3, and 14 mg/ml, respectively.

Andrographolide is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, andrographolide should first be dissolved in DMF and then diluted with the aqueous buffer of choice. Andrographolide has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMF:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

Andrographolide is a labdane diterpenoid that is the main bioactive component of *A. paniculata*, a well-recognized medicinal plant in Asia. It exerts a wide range of therapeutic actions, including immunosuppressant, antithrombotic, anti-inflammatory, antineoplastic, antiviral, antibacterial, antidiabetic, antioxidative stress, antipyretic, antiedematogenic, and antinociceptive activities.¹ Andrographolide treatment inhibits nuclear factor kappa B (NF-κB) binding to DNA promoters of target genes (IC₅₀ = ~15 μM), by forming a covalent adduct with reduced cysteine (62) of the NF-κB p50 subunit, and can also induce expression of the CYP1A subfamily of the cytochrome P450 family of enzymes.^{2,3} At 5 μg/g body weight it can suppress the activation of NF-κB in stimulated endothelial cells, reducing the expression of the cell adhesion molecule E-selectin, abrogating the cytokine- and endotoxin-induced peritoneal infiltration of neutrophils, attenuating septic shock, and preventing allergic lung inflammation in a mouse model of asthma.³

WARNING

THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

SAFETY DATA

This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the [complete](#) Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY

Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.
