### Laboratory Procedures

Platycodin D is supplied as a crystalline solid. A stock solution may be made by dissolving the platycodin D in the solvent of choice, which should be purged with an inert gas. Platycodin D is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of platycodin D in these solvents is approximately 3, 20, and 25 mg/ml, respectively.

Platycodin D is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, platycodin D should first be dissolved in DMF and then diluted with the aqueous buffer of choice. Platycodin D has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMF:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

### Description

Platycodin D is a saponin isolated from the root of *P. grandiflorum*. Root preparations have been used extensively in Chinese herbal medicine for many applications, particularly for upper respiratory disorders and inflammation.<sup>1</sup> The cellular and physiological actions of purified platycodin D have not been elucidated.
