### Laboratory Procedures

2-Pyridylamide oxime is supplied as a crystalline solid. A stock solution may be made by dissolving the 2-pyridylamide oxime in the organic solvent solvent of choice, which should be purged with an inert gas. 2-Pyridylamide oxime is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of 2-pyridylamide oxime in ethanol is approximately 20 mg/ml and approximately 30 mg/ml in DMSO and DMF.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of 2-pyridylamide oxime can be prepared by directly dissolving the crystalline compound in aqueous buffers. The solubility of 2-pyridylamide oxime in PBS, pH 7.2, is approximately 1 mg/ml. We do not recommend storing the aqueous solution for more than one day.

### Description

2-Pyridylamide oxime is a synthetic intermediate useful for pharmaceutical synthesis.
