## Laboratory Procedures

Gö 6983 is supplied as a crystalline solid. A stock solution may be made by dissolving the Gö 6983 in an organic solvent purged with an inert gas. Gö 6983 is soluble in organic solvents such as DMSO and dimethyl formamide (DMF). The solubility of Gö 6983 in these solvents is approximately 10 mg/ml.

Gö 6983 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, Gö 6983 should first be dissolved in DMF and then diluted with the aqueous buffer of choice. Gö 6983 has a solubility of approximately 0.1 mg/ml in a 1:10 solution of DMF:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

## Description

Gö 6983 inhibits several isoforms of protein kinase C (PKC; IC<sub>50</sub> = 7, 7, 6, 10, 60, and 20,000 nM for PKCα, PKCβ, PKCγ, PKCδ, PKCζ, and PKCμ, respectively).<sup>1</sup> It provides cardioprotective effects in myocardial ischemia/reperfusion by attenuating contractile dysfunction.<sup>2,3</sup>
