PRODUCT INFORMATION

PRMT6 (human recombinant; baculovirus expressed)

Item No. 13866

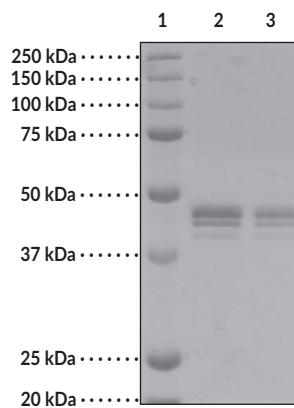

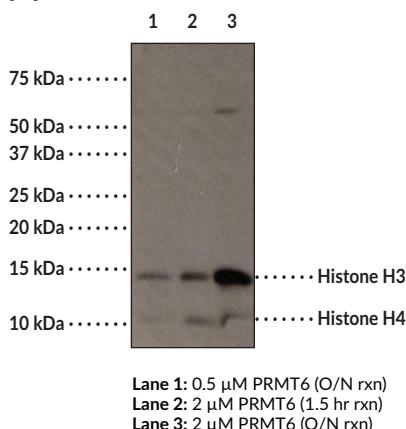

Overview and Properties

Synonyms:	Histone Arginine N-methyltransferase PRMT6, HRMT1L6, Protein Arginine Methyltransferase 6
Source:	Recombinant N-terminal hexahistidine-tagged protein expressed in Sf21 cells
Amino Acids:	2-375 (full length)
Uniprot No.:	Q96LA8
Molecular Weight:	43.7 kDa
Storage:	-80°C (as supplied); avoid freeze/thaw cycles by aliquoting protein
Stability:	≥1 year
Purity:	batch specific
Supplied in:	50 mM Tris-HCl, pH 8.0, with 150 mM sodium chloride and 20% glycerol
Protein	
Concentration:	batch specific mg/ml

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Images

Autoradiograph of core histones (Item No. 11010) separated on SDS-PAGE following a reaction with [³H]-SAM and PRMT6

Representative gel image shown; actual purity may vary between each batch.

WARNING
THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

SAFETY DATA

This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY

Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.

PRODUCT INFORMATION

Description

Protein arginine methyltransferases (PRMTs) are a family of enzymes with highly conserved catalytic domains that catalyze the transfer of a methyl group from S-adenosyl-L-methionine to a specific arginine residue in a target protein. PRMT6 is a nuclear type-1 PRMT, catalyzing the formation of ω -N^G-monomethylarginine and asymmetric ω -N^G,N^G-dimethylarginine on both histone and non-histone targets.¹⁻³ Histone H3 methylation of arginine 2 (H3R2) is a repressive transcriptional mark primarily catalyzed by PRMT6.⁴ H3R2 dimethylation antagonizes the binding of effector proteins sensitive to H3K4 methylation, such as the Mixed Lineage Leukemia complex methyltransferase.⁵ Non-histone targets of PRMT6 includes the nuclear high-mobility group protein HMGA1a, a protein important in several processes relating to the maintenance of DNA integrity.³
