Laboratory Procedures

ML-180 is supplied as a crystalline solid. A stock solution may be made by dissolving the ML-180 in the solvent of choice. ML-180 is soluble in DMSO at a concentration of approximately 10 mg/ml.

Description

ML-180 is an inverse agonist of liver receptor homolog-1 (LRH-1, $IC_{50} = 3.7 \mu M$) with maximum efficacy of 64% repression.¹ It is inactive at the related steroidogenic factor-1 transcriptional activator.¹ Through LRH-1, ML-180 alters the expression of haptoglobin and serum amyloid proteins A1 and A4, induces the death of estrogen-receptor negative MDA-MB-231 breast cancer cells, and inhibits the steroidogenic acute regulatory promoter ($IC_{50} = 2.05 \mu M$).¹
