Description

(±)-O-Desmethyl venlafaxine-d₆ (Item No. 15843) is an analytical reference standard intended for use as an internal standard for the quantification of (±)-O-desmethyl venlafaxine by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

(±)-O-Desmethyl venlafaxine is a metabolite of the antidepressant venlafaxine (Item Nos. 25524 | 11567).¹ This product is intended for research and forensic applications.
